PREFACE

While serving in Amar Singh College, Srinagar for about 3 years between 2000-2003 as Assistant Professor of Botany, I could find an opportunity to closely observe the flowering plants of Campus of this College. Although, a number of books has already been published on the flowering plants of Kashmir in a row yet there seems to be a good scope to enhance the knowledge about plants of Kashmir. My attention was mainly focused to identify and to describe the species of the Flowering plants and arrange them family wise that could be helpful to the students and a variety of readers. Therefore, all families were arranged according to Bentham and Hooke’s System of Classification (1862-1883). All species growing within Campus of this College include herbs, shrubs and trees. Most of these species bears pretty, beautiful colourful flowers that generates curiosity to work on these flowering plants. I could find a great deal of uniformity in characteristics of of these species, however, the treatment in description of these species is somewhat equally base on the necessities in certain cases. A due attention has been paid to make this compilation good, giving citations, brief description of flowering plants, flowering and fruiting periods, distribution of species and ethnobotanical utility in some selected number of species.

The present compilation deals with taxonomic accounts of 315 species - genera and - families of flowering plants along with brief descriptions, citations, synonyms, and recent nomenclature.

I am grateful to Professor A. K. Koul and Professor Rani Magotra for encouragement. Thanks are due to Prof. G. M. Dar, Principal, Amar Singh College, Srinagar, Mohd. Asraf, Head, Department of Botany and other staff members.

It is hoped that the present publication will overcome the paucity of information about the flora of Srinagar, Kashmir. This book will definitely help the students, researchers, readers in a variety of ways.

B. L. Bhellum
INTRODUCTION

Studies on the flora of Campus Amar Singh College was conducted between 2001 and 2003. The species were confirmed with the help of available floristic literature and comparison of some of Herbarium specimens in (KUH.) Herbarium Centre For Taxonomy, University of Kashmir and IIIM (RRL.) Janki Emal Herbarium Jammu. All the families are arranged according to Bentham and Hooker’s system of classification and all the genera and species under each family collected from the area have been arranged in alphabetical order. The 10 most dominant genera and families represented in the area of study are shown in the Bar graphs (Fig. 1 & 2). The most dominant family of the study is Asteraceae representing 41 species representing 30 genera.

The present author made an attempt to compile the Flora of Campus, Amar Singh College, Srinagar, based on the observation made in three years between 2001 and 2003. It is pertinent to mention here that the area of the present floristic study is very small. As a consequence of intensive study the author has collected as many as 315 species of...
angiosperms. Many temperate species like butter cups, clovers, mallows, violets, bellflowers, mints, plantagos, spurge, stinging nettles, willows, gageas, rushes and sedges have been collected from the campus. *Platanus orientalis* L. is a common shade tree, *Populus nigra* L. is planted along the roadsides, Willows are planted along boundary walls on one side.

In the present investigation, a total of 315 species representing 209 genera belonging to 75 families have been given. Among these, 265 species representing 171 genera are dicotyledons, belonging to 64 families. The monocotyledons species are 50 representing 38 genera belonging to 11 families as given (Table 1).
MATERIAL AND METHODS

The present flora is based on the collections between 2001-2003 during the stay at Srinagar in different seasons round the year for almost three years. The specimens were collected in the polythene bags or ruck-sacks, carried to the laboratory and then pressed in the wooden plant press after wrapping in the blotters. The specimens were changed frequently to reduce discoloration of the foliage and flowers. The collections were made alone or in the company of friends and a helper. The field data was entered in the field book. The levels were pasted after mounting the specimens on the herbarium sheets and data of the field notes were entered on the labels. The specimens were identified in the laboratory with the help of taxonomic literature. In some cases where there is difficulty in identification of the floral parts the part of the plant specimens were boiled for about 1 or 2 minute to get its natural shape and size.

FLORISTIC ANALYSIS

A total of 315 species representing 209 genera of 74 families collected from Campus Amar singh College, Srinagar, Kashmir belongs exclusively to angiosperms. Of the total 75 families, 64 families (85.3%), 171 genera (81.8%), species 265 (84.1%) are dicotyledons and 11 families (14.7%), 38 genera (18.2%), and 50 species (15.9%) are monocotyledons. The genus species ratio is 1:1.5 and ratio of dicotyledons to monocotyledons is 1:5.3. The ten dominant families constitute 53.6% of the total number of species.

The ten dominant genera with more than 3 species are Veronica, Euphorbia, Cyperus, Ranunculus, Amaranthus, Chenopodium, Mentha, Plantago, Polygonum and Trifolium (Table 3).
DIAGNOSTIC KEYS, ENUMERATION AND TAXONOMIC DESCRIPTION

All the families are arranged according to Bentham and Hooker’s system of classification (1862-1883) with a slight modification wherever necessary based on recent literature. The number of genera and species within each family are given below.

KEY TO FAMILIES

<p>| 1  | + | Root system characterized by tap roots; leaves usually net-veined; flowers usually 4-5 merous; embryo usually with 2 cotyledons | 2 |
|    | - | Root system characterized by adventitious roots; leaves usually parallel veined; flowers 3-merous or in multiple of 3; embryo with 1 cotyledon | 74 |
| 2  | + | Plants parasitic | 3 |
|    | - | Plants non-parasitic | 4 |
| 3  | + | Climbing herbs; leafless | Cuscutaceae |
|    | - | Climbing shrubs; leaf bearing | Loranthaceae |
| 4  | + | Perianth 2-seriate | 5 |
|    | - | Perianth 1-seriate | 62 |
| 5  | + | Petals free or very rarely united | 6 |
|    | - | Petals united | 40 |
| 6  | + | Sepals usually usually free | 7 |
|    | - | Sepals united at least towards base | 32 |
| 7  | + | Flowers 3-merous | Berberidaceae |
|    | - | Flowers 4 or 5-merous | 8 |
| 8  | + | Carpels free | 9 |
|    | - | Carpels free | 10 |
| 9  | + | Plants herbs | Ranunculaceae |
|    | - | Plants trees | Magnoliaceae |
| 10 | + | Ovary unilocular | 11 |
|    | - | Ovary bi- or multilocular | 18 |
| 11 | + | Placentation parietal | 12 |
|    | - | Placentation not parietal | 18 |
| 12 | + | Sepals 2-3 | 13 |
|    | - | Sepals 4-5 | 17 |</p>

**AQUILEGIA L.**

Perennial, erect, pubescent or sparsely hairy herbs; leaves ternately compound, cauline leaves alternate, leaflets 3-lobed, margin crenate; flowers solitary or lax panicles, deeply purple; sepals 5, petaloid; petals 5, spurred, spur short; stamens many, filament short; carpels 6, apocarpous, hairy.

*Flowering and Fruiting:* May-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 290

*Distribution:* India (Jammu and Kashmir); Atlantic Islands to East Siberia and America.
**CERATOCEPHALUS Moench.**

</tbody>
</table>

Annual, smooth or slightly wooly herbs; leaves all radical, 3-lobed or pinnately divided, segments narrow or finely divided; flower solitary, yellow; stamens 5-15; achenes gibbous at along sides, beak curved or falcate.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 118

*Distribution:* India (Jammu and Kashmir, Western Himalayas from Kashmir to Kumaon) and South East Europe.

Annual slightly herbs a few cm in height; leaves radical 3-lobed or finely divided, flowers solitary, yellow; achenes gibbous at sides, beak straight.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 122

*Distribution:* India (Jammu and Kashmir) and South East Europe

**CLEMATIS L.**

A woody climber, glabrescent or sparsely hairy on twigs; leaves ternate to pinnate, segments 5-7, petiolate, broadly ovate cordate, coarsely dentate to incised dentate, sometimes 3-lobed, acute to nearly caudate; inflorescence panicles; flowers numerous; sepals whitish, upto 12 mm long long, oblong to oblong-lanceolate, acute sparsely hairy outside, densely...
tomentose inside. Filaments flattened, narrowed upwards, densely hairy. Anthers bithecous; achenes pubescent. Styles about 3 cm, slender, ciliate.

*Flowering and Fruiting:* April-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 738

*Distribution:* India (Jammu and Kashmir, Himachal Pradesh, W. Bengal, Arunachal Pradesh, & Sikkim); Nepal Bhutan and South Tibet & China.

Annual, 10-50 cm high, branched, sparsely hairy especially above. Lower most leaves with a distinct petiole equalling or slightly longer than the leaf-blade, blade obovate-spathulate to oblanceolate. Other leaves 3-parted to ternate with obovate-spathulate segments again deeply divided into linear, toothed or entire lobes (2-6 mm wide). Flowers 5-12 mm in diameter, sulphur yellow to greenish-yellow. Petals obovate, indistinctly clawed. Achenes inserted in the pubescent receptacle.

*Flowering and Fruiting:* March-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 184

*Distribution:* India (Jammu and Kashmir); West Himalayas; Central Asia; South Europe.

Type in London, described from Europe.

Parts used: Whole plant

Ethnobotanical utility: Decoction of whole plant is administered for curing diarrhoea. Leaf extract is prescribed in intermittent fever and asthma.

Tall perennial, 30-70 cm high, with a creeping rootstock producing numerous fibrous roots and flowering stems. Stems up to 5 mm thick, usually much branched, with appressed or spreading hairs, especially near the base often glabrescent later. Basal leaves with long petioles (12-15 cm), densely patent-hairy, rounded-reniform, ternate, with broadly obovate segments, free to near the base. Stem leaves sessile, lower ones shortly petiolate, decreasing in size upwards. Flowers 17-25 mm in diameter, yellow. Sepals 5-7 mm, lanceolate to ovate-lanceolate with a wide membranous margin. Petals 8-12 mm, roundish obovate, sometimes tapering into an indistinct claw. Achenes 2-2.5 (2.5) mm in diameter, numerous, suborbicular.

**Flowering and Fruiting:** May-July

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 232

**Distribution:** India (Jammu and Kashmir); Himalayas; Temperate Asia; Pakistan; Afghanistan; Nepal; Bhutan; Europe; Northern America. Type described from India.

Parts used: Latex

Ethnobotanical utility: Latex is applied at the site of alopecia to promote hair growth.

Glabrous annual, stem solitary, fistulose, or several short stems branched from near the base, sometimes stem absent, leaves and peduncles arising from base. All leaves similar, petioles of lower most upto 15 cm, decreasing in length towards apex, blade roundish reniform to suborbicular, ternate with perfectly separate segments. Flowers yellow. Sepals reflexed, membranous. Petals roundish-ovobvate. Achenes 5-6 mm long, ovate.

**Flowering and Fruiting:** May-July

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 276

**Distribution:** India (Jammu and Kashmir); West Asia; Pakistan; introduced in America, Africa, Europe and Australia. Type described from Mediterranean region

Flowering & Fruiting: March-April

Parts used: Whole plant
Ethnobotanical utility: Whole plant decoction is taken orally as a cure for periodic fever, asthma and arthralgia. Leaf paste is styptic and is applied on cuts, wounds and abscess as antiphlogistic.

Annual, 20-60 cm tall, glabrous herbs; stem fistul ar; basal leaves petiolate, base cuneate, lobes obtuse, segments toothed; upper leaves shortly stalked or sessile, simple, linear; flowers nearly 8 mm across, yellow; achenes apiculate.

*Flowering and Fruiting*: May-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 111

*Distribution*: India (Jammu and Kashmir); Temperate Asia; Pakistan; Bhutan; Europe; Nepal; Afghanistan; Russia and Northern America.

Annual herbs; stem smooth; leaves radical, submerged, lobed or finely diviced, segments threa-like; flowers stalked, white; stamens few; achenes transvesely wrinkled.

*Flowering and Fruiting*: June-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 203

*Distribution*: India (Jammu and Kashmir); Temperate North & South Hemisphere; Afghanistan; Bluchistan and West Tibet.

2. MAGNOLIACEAE

*Magnolia L.*

A medium sized to a large handsome tree; leaves broadly ovate, elliptic-oblong, coriaceous shining, margin entire, yellow-brown pubescent; flowers white fragrant; buds enclosed in a silky spathaceous bracts fruits a woody cone, seeds bright red. Planted in gardens as avenue tree.
Flowering and Fruiting: May-July
Specimens Examined: A. S. College, Srinagar; Bhellum, 301
Distribution: India (Jammu and Kashmir; North West Himalaya; Kashmir to Kumaon. Native of South East Unite States of America.

3. PAEONIACEAE

PAEONIA L.

Shrubs stourt; roots in clusters, fleshy; leaves a lternate, divided into leaflets or deeply incised, glabrous; flowers usually solitary, sometimes 2 or , white; sepals 5, persistent; petals 5 - 10; carpels 1-5, sometimes with fleshy disc; fruit a folicle.

Flowering and Fruiting: May-July
Specimens Examined: A. S. College, Srinagar; Bhellum, 515
Distribution: India (Jammu and Kashmir, North West Himalaya, Kashmir to Kumaon).

4. BERBERIDACEAE

BERBERIS L.

Deciduous, erect shrubs with glabrous branches, stems 2-3 m tall, wood yellow; leaves obovate, 3-5 cm long, arranged in axillary simple drooping fascicled racemes longer than leaves, in 3-fid spines, sessile, tough, narrowly lanceolate, upper surface bright green, lower paler; racemes about 20 flowered; corolla pale-yellow; berries oblong-ovoid, blue-black.

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 874
Distribution: India (Jammu and Kashmir); Africa; Tropical and temperate Asia; Europe; Northern and Southern America and Australasia.
5. PAPAVERACEAE

**PAPAVER L.**

*Papaver rhoeas* L., Sp. Pl. 507. 1753; Hooker and Thoms. in Hooker’s Fl. of Brit. Ind. 1: 117. 1872.

Annual branched, bristly herbs 30 – 60 cm in height; leaves pinnately divided, segments narrow, awned; scape with spreading or appressed hairs; flowers scarlet; Petals 4, in unequal pairs; anthers blue; capsule smooth, stlaked, subglobose to obovoid, stigmatic rays 10 – 12.

**Flowering and Fruiting:** March-April

**Specimens Examined:** A. S. College, Srinagar; *Bhellum, 883*

**Distribution:** India (Jammu and Kashmir); Europe; West Asia and Northern America

6. FUMARIACEAE

**FUMARIA L.**

Annual herbs, delicate, much branched, 5 – 25 cm long, glabrous, glaucous; leaves much dissected 2 – 3 pinnatisect, decompound, recemes shortly peduncled or subsessile; flowers white or pale pink, 5 – 6 mm long; fruit suborbicular with rounded apex; grows in cultivated fields as a weed.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; *Bhellum, 123*

**Distribution:** India (Jammu and Kashmir); Thailand; Malaysia; Asia Tropical; Bangladesh; Africa; Pacific Islands, Fiji and N. Hemisphere.

**ALLIARIA Scop.**

Annual herbs, 20 – 40 cm tall or more, usually glabrous or subglabrous; leaves simple, cordate, or ovate, lyrately pinnatifid, lower petiolate, petiole long, ovate cordate, upper sessile margin dentate; racemes up to 30 cm long, flowers white nearly 5 mm across; siliquae linear, terete, bilocular, dehiscent.

*Flowering and Fruiting*: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 260

Distribution: India (Jammu and Kashmir); Pakistan; Europe; North Africa and some Temperate parts of Asia.

**ARABIDOPSIS** Heynh.

Annual or biennial erect tomentose or hairy herbs; leaves shortly petioled, radical obovate, cauline sessile, oblong, flowers pink or white; siliquae erect, terete, glabrous, spreading.

**Flowering and Fruiting:** March-April

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 262

**Distribution:** India (Jammu and Kashmir); Africa; Temperate Asia; Europe and Northern America

Annual erect or suberect herbs, up to 50 cm tall; stem branched, hairy; basal leaves rosulate or many, obovate-oblong, coarsely toothed, sometimes subentire, upper ones few, oblong, sessile, base sagittate; flowers yellow; siliquae linear, subcompressed, scabrous.

**Flowering and Fruiting:** March-April

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 230

**Distribution:** India (Jammu and Kashmir); Nepal; Pakistan; Temperate and tropical Asia. Native of Africa.

Annual herbs clothed with forked stellate hairs; stem slender, 15-45 cm tall; leaves pinnately divided, radical leaves obovate, obtuse, pointing downwards, terminal lobe the largest; cauline leaves few, sessile, smaller; flowers white turning pink; siliquae slender, glabrous, curved.

*Flowering and Fruiting:* March-May

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 259*

*Distribution:* India (Jammu and Kashmir); West Asia; Europe and Britain.

**ARABIS L.**

Annual herbs, clothed with more or less forked hairs; stem erect, branches very short; leaves simple, radical stalked, cauline sessile, stem-clasping, basal lobes long; flowers white erect racemes, spreading later; siliquae linear; seeds in a single row.

*Flowering and Fruiting:* March-April

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 258*

*Distribution:* India (Jammu and Kashmir, West Himalaya); Africa; Temperate Asia; Europe and Northern America.

**CAPSELLA Medik.**

Annual herbs; stem erect, upto 50 cm tall, clothed with simple or forked hairs; leaves in rosette, usually pinnatifid, sometimes lanceolate; segments lyrate or sinnatuly lobed; inflorescence racemes which appear as corymbs; sepals 4, polysepalous; corolla with 4 petals; fruits notched at the tip, glabrous; seeds oblong, ovaqi, brown, punctate.

*Flowering and Fruiting:* April-June

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 106*

*Distribution:* India (Jammu and Kashmir); Pakistan, Europe; Asia and Northern America.

</table>

Annual or biennial herb, 10 – 30 cm tall; branches many from the base; basal leaves 2 – 7 jugate, glabrous or hairy, leaflets ovate-orbicular, terminal one slightly larger; flowers white; fruits generally overtopping flowers.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 795

**Distribution:** India (Jammu and Kashmir); Isles of Europe; Pakistan; Afghanistan; Asia and introduced in Northern America.

**Uses:** Eaten in N. E. India.

Annual glabrous, herbs, about 25 cm tall; leaves forming radical at base, cauline, pinnately compound, leaflets rather narrow, hairy or glabrous; inflorescence racemes, in terminal position; flowers white; sepals 4, free; petals 4, white free; stamens tetradyamalous; ovary linear, stigma sessile; siliquae linear in outline; seed somewhat square in shape.

**Flowering and Fruiting:** June-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 821

**Distribution:** India (Jammu and Kashmir, Uttarakhand), West Himalayas.

Perennial herbs with short rootstock; leaves pinnately divided, basal leaves with larger leaflets, cauline leaves with smaller leaflets; inflorescence corymbose; petals 4, white or mauve; ovary elongate; siliquae thinly partitioned with a single row of seeds.

**Flowering and Fruiting:** April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 335
Distribution: India (Jammu and Kashmir); Northern and Western Himalayas; China, Nepal and Pakistan.

**CORONOPUS** Zinn.

*Lepidium didymum* L. Mant. 1: 92. 1767.

Annual or biennial foetid herbs; stem prostrate or suberect, clothed with simple or 2-forked hairs; leaves pinnately compound, segments pinnatifid or pinnatisect, apiculate; inflorescence racemes; flowers actinomorphic, pedicel elongating in fruiting; sepals ovate, green; petals absent, when present linear; stamens 2; when 4, two fertile; siliquae bilobed; seeds brown, punctate.

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 130
Distribution: India (Jammu and Kashmir); Tropical and South America

**DESCURAINIA** Webb. et Berthel.

Annual or biennial herbs 30 – 60 cm tall or more hair, hairs simple or stellate and often glandular ; leaves 2- 3-pinnatisect, lobes linear oblong; flowers 2-3 mm across, yellow; stamens 6; style short, stigma depressed, capitate; siliquae linear, 15 – 35 mm long; seeds reddish-brown, 1 – 2 seriate.

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 179
Distribution: India (Jammu and Kashmir); Pakistan; Afghanistan; Africa and Europe.
**ERUCASTRUM**

Annual herbs, erect, more or less hairy, hairs retrose; leaves alternate, petiolate, irregularly pinnate; racemes elongate; flowers yellow; siliquae elliptic compressed, minutely pitted reticulate.

Grows wild on waste places.

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 109

*Distribution*: India (Jammu and Kashmir); Pakistan; Nepal and Europe; Native of Europe.

</thead>
</table>
| 1 | + Hairs on the stem capitate, glandular | *Lepidium capitata*
|   | - Hairs on the stem neither capitate nor glandular | *L. virginicum*

Annual or biennial herbs; stem suberect or procumbent, branched, often spreading glandular hairy; basal leaves pinnatifid, sessile, 3-6 cm long, acute, cauline leaves toothed, sessile; racemes capitate; flowers white.

*Flowering and Fruiting*: May-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 884

*Distribution*: India (Jammu and Kashmir); Bhutan; Tibet; Nepal; Pakistan and Northern & Southern America. Endemic to West Himalayas.

Annual herbs 30 – 50 cm tall; stem erect, minutely hairy or downy with long appressed simple hairs; basal leaves lyrate or pinnately lobed, with large rounded terminal lobe and numerous lateral lobes clothed with appressed hairs on both the surfaces; racemes 5 – 10 cm long;; flowers minute, 1 - 2 mm across; siliquae 3 – 4 mm across almost orbicular with a broad but a shallow notch at apex.
Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 327

Distribution: India (Jammu and Kashmir); Northern & South America; Europe; Temperate Asia; New Thailand and Australasia.

**LOBULARIA** Desv.

*Lobularia maritima* (L.) Desv.

Perennial herbs with woody base; stem appressed hairy; leaves narrowly linear, oblanceolate, entire; inflorescence racemes; flowers white, scented like honey; petals more or less orbicular, clawed; fruits orbicular, compressed.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 305

Distribution: India (Jammu and Kashmir); Africa; Europe; N. America; Australasia and Mediterranean region.

Perennial herbs; stem weak, angular; basal, leaves withering as the plant advances with age, cauline leaves lyrately lobed, lobes unequal, coarsely toothed; flowers in axillary or terminal; sepals elliptic, rounded at apex; petals white obovate, clawed; stamens tetradynamous; ovary elliptic, style short; stigma 2-lobed; fruits narrowly oblong; seeds closely held, pale-brown.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 129

Distribution: India (Jammu and Kashmir); Europe; Russia; Austria; Switzerland; United Kingdom; Norway and Bosinia.

Glabrous perennial herbs; stem short or long, creeping, much brached; leaves pinnately compound, leaflets sessile ovate, entire or sinuately lobed; inflorescence short racemes; flowers white; petals larger than sepals; siliquae linear.

Flowering and Fruiting: May-July
Specimens Examined: A. S. College, Srinagar; Bhellum, 350
Distribution: India (Jammu and Kashmir); Northern Africa; Middle East; Europe and United States of America.

Annual, erect or decumbent herbs, 15 – 50 cm tall, rather zigzag, angular, ribbed; leaves pinnate, deeply pinnatisect, lobes obovate, or oblong, cuneate; flowers 4 – 5 mm across, yellow, arranged in recemes; siliquae cylindrical, linear-oblong, glabrous, seeds many, brown, minutely pitted.

Flowering and Fruiting: May-June
Specimens Examined: A. S. College, Srinagar; Bhellum, 191
Distribution: India (Jammu and Kashmir); Tropical and Central Asia; Pakistan; Nepal; introduced in N. America, temperate Eurasia and Europe.

</table>

Annual or biennial, 30-100 cm tall, erect, branched, glabrous or nearly so; lower leaves lyrate, a few lobed, shortly petaled; terminal lobe ovate-oblong, distantly toothed; lateral lobes smaller but similar, dentate to sub-entire; upper leaves gradually becoming
smaller and linear, subsessile to sessile; Racemes many flowered.; flowers c. 5 mm across, yellow; pedicels 5-10 mm long in fruit, spreading, slightly thickened; sepals 3-4 mm long. Petals (5-8 mm long; stamens c. 3:5 mm long; siliquae linear, subcylindrical; seeds many oblong, brown, finely granulate.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 371

Distribution: India (Jammu and Kashmir); Tropical and Central Asia; Afghanistan; Pakistan; China; Nepal and Russia.

Annual or biennial, upto 100 cm tall, branched, hispid below; basal leaves lyrate, pinnatipartite, terminal lobe elongate, lateral lobes 3 – 4 paired, dentate, upper ones similar but smaller; racemes many flowered, upto 40 cm long in fruiting; flowers 6 – 8 mm across, bright yellow; siliquae 20 – 40 cm long or more linear subcylindrical, erect.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 326

Distribution: India (Jammu and Kashmir); Afghanistan; Pakistan, Nepal; Russia; Tibet and most part of Central Asia and distributed elsewhere.

Annual, erect, stiff, branched, hairy herb, 20 – 50 cm tall; basal leaves rosulate, deeply pinnatisect, terminal lobe stalked, irregularly toothed, cauline leaves smaller; racemes branched, 20 – 30 flowered; flowers 4 mm across, yellow; siliquae short, 10 – 15 mm long.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 212

Distribution: India (Jammu and Kashmir); Pakistan; Afghanistan; Europe; Asia; Africa; Australasia; Northern America America and Southern America.
8. CLEOMACEAE

CLEOME L.

Key to Species

| 1 | + | Flowers white; filaments usually purple; stamens borne on long gynophore ---------------
| - |   | Cleome gynandra |
|   |   | ------------------------
|   |   | C. viscosa |

Annual erect, branched glandular-pubescent herbs; stem striate; leaves 3-5-foliate, leaflets sessile, or subsessile, central one the largest, acute, base cuneate; flowers yellow or white tinged yellow; stamens on androgynophore; ovary linear; fruits dark brown, globose, depressed capsule.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 308

Distribution: India (Jammu and Kashmir); Australia and Southern Africa.

Annual glandular hairy herb; stem striate, viscous to touch; leaves 3-5 foliate; leaflets sessile, elliptic-oblong; flowers yellow in axillary or terminal racemes; ovary glandular pubescent; fruit a capsule, glandular hairy.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 887

Distribution: India (Jammu and Kashmir); China; Pakistan; Tropical Africa; Tropical Australia and Malaysia.

9. VIOLACEAE

VIOLA L.

Herbs perennial, acaulescent, stoloniferous, 3-15 cm tall. Rhizome erect or oblique, brownish, robust, densely noded, with numerous roots. Leaves basal, leaf blade orbicular or reniform to broadly ovate-cordate. Flowers deep purple, large, fragrant. Sepals oblong or oblong-ovate. Petals crenate, upper ones obovate. Ovary puberulous, styles slender and straight at base. Capsule globose.

*Flowering and Fruiting*: April-May

*Specimens Examined*: A.S. College, Srinagar; Bhellum, 156

*Distribution*: India (Jammu and Kashmir); Europe; Africa and Asia.

Parts used: Flowers, root, whole plant

Ethnobotanical utility: Flower and root decoction cures cough, cold and bronchitis. Petals are made in the form of syrup which is used against throat infections. Decoction of fresh flowering herb is used as diuretic and blood purifier.

Annual pubescent herbs about 20 cm tall; stem branched from the base; leaves ovate, obovate, elliptic, spatulate; flowers white; calyx gradually narrow above, sepals 5, petals 5; capsule cylindric, 2.5-4 mm long, reniform; seeds tuberculate.

**Flowering and Fruiting**: April-May

**Specimens Examined**: A. S. College, Srinagar; Bhellum, 205

**Distribution**: India (Jammu and Kashmir); Asia; Central Europe; Turkey; China and North-W. Africa.

---

Annual herbs; stem erect or ascending; leaves sessile or subsessile, elliptic-ovate, rarely orbiculate, 3-5 nerved, acute; inflorescence terminal cymes; sepals green, 3-nerved; petals 5, white; capsule loosely enclosed in calyx; seeds prominently tuberculate.

**Flowering and Fruiting**: April-May

**Specimens Examined**: A. S. College, Srinagar; Bhellum, 208

**Distribution**: India (Jammu and Kashmir); Pakistan; Temperate N. Asia; Africa and Europe.

---

**CERASTIUM L.**

**Cerastium vulgatum** L., Sp. Pl. ed 2, 627. 1762, non L. 1753; Edgew. & Hooker f. in Hooker f., FBI. 1: 228. 1874.

Annual pubescent more or less viscid herbs; stem often many, spreading from the base; leaves stalked, ovate, narrowly oblong, upper sessile, more or similar and narrower; sepals lanceolate; petals as many as sepals;

**Flowering and Fruiting**: April-May

**Specimens Examined**: A. S. College, Srinagar; Bhellum, 295

**Distribution**: India (Jammu and Kashmir); Temperate N. Asia; Africa and Europe.
**MYOSOTON Moench.**

Perennial viscidly pubescent herbs; stem much branched; leaves ovate, cordate, basal one petiolate, upper sessile; flowers white in axillary or terminal cymes; petals 2-fid; capsule exserted, 10 mm long; seeds subreniform, brown.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 213*

*Distribution:* India (Jammu and Kashmir); Temperate and tropical Asia; Europe and Northern America.

---

**SAGINA L.**

Perennial decumbent glabrous tufted herbs; stem many from base; leaves connate at base, margined with white sheath, acuminate, basal leaves larger, upper smaller; flowers white, solitary axillary; sepals 4 or 5 green; petals absent; stamens 4 or 5; capsule minute, exserted, 3 mm long.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 587*

*Distribution:* India (Jammu and Kashmir); Pakistan; Zimbabwe; almost Cosmopolitan.

---

** STELLARIA L.**

An annual, decumbent, glabrous, branching herb. Leaves ovate, usually cordate, lower ones stalked while upper ones sessile and narrower. Flowers in axillary or terminal cymes. Sepals hairy. Petals deeply two lobed. Capsules ovoid.

*Flowering and Fruiting:* March-April

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 133*

*Distribution:* India (Jammu and Kashmir, almost throughout India); Europe; and almost Cosmopolitan.
Parts used: Whole plant

Ethnobotanical utility: Paste of whole plant is used as plaster on swelling and broken bones.

Plant extract is anti-pyretic, and also cures chest congestion, cough and cold.

11. PORTULACACEAE

PORTULACCA L.

Annual erect, prostrate herbs; stem 15-30 cm long, nodes reddish brown to light pink;
leaves linear, oblong, 1-3 cm long apex rounded, margin entire, base cuneate; flowers few, yellow;
sepal 5; petals 5, yellow; stamens 8-12; styles variable, 3-8; fruit capsule; seeds many dark brown.

Flowering and Fruiting: April-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 770

Distribution: India (Jammu and Kashmir); Northern America and throughout the warm countries of the world.

12. TAMARICACEAE

TAMARIX L.

Deciduous shrubs or trees; stem much branched, 2-3 m tall, branches slender, arching;
leaves alterante, scale like, deltoid, acute to acuminate, gibbous at base, deciduous, bright green, tiny glands secrete salts; inflorescence spike like racemes, slender, 4-6 cm long; flowers 4-merous, minute, rose-pink; stamens 4, filaments dilated at base; styles 3 or 4; capsule, 3-4 mm long.

Flowering and Fruiting: April-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 222

Distribution: India (Jammu and Kashmir); Pakistan; Europe and Burma. Native of Southern Europe.
13. HYPERICACEAE

HYPERICUM L.

Perennial herbs; leaves oblong, obtuse, veins pellucid on lower surface; flowers 2.5 cm across in terminal corymbs; sepals narrowly lanceolate, acute, margin black dotted; petals yellow, margin black dotted; stamens numerous in 3 bundles; twice as long as ovary; fruit a capsule; seeds many.

Flowering and Fruiting: March-April

Specimens Examined: A. S. College, Srinagar; Bhellum, 284

Distribution: India (Jammu and Kashmir); Central Asia; Russia; Europe; N.-W. Africa and introduced in other parts of the world.

Unarmed shrubs; leaves cordate, about 10 cm long, margin serrate; peduncle upto 10 cm long; bracts shorter than calyx; flowers about 10 cm across, white or purplish pink; sepals ovate, lanceolate, connate below the middle; capsule globose, flattened, hairy.

*Flowering and Fruiting: April-May*

*Specimens Examined: A. S. College, Srinagar; Bhellum, 116*

*Distribution: India (Jammu and Kashmir); Native of China and introduced in India.*

---

Annual, erect or branched herbs; stem slender, clothed with white stellate hairs; leaves dimorphic, 3-5 lobed; flowers solitary, pale yellow spotted purple in the centre.

*Flowering and Fruiting: April-May*

*Specimens Examined: A. S. College, Srinagar; Bhellum, 400*

*Distribution: India (Jammu and Kashmir); China; Kazakhstan; Kyrgyzstan; Mongolia and Pantropical.*

---

**LAVATRA L.**

Perennial 1-2.5 m tall, hispid herbs, hairs branched; leaves ovate, cordate, 3-5 lobed, margin toothed; flowers 7-11 cm across, purple, pink or white, streaked with dark veins; calyx 5-lobed, pubescent, acute; petals obcordate, cuneate; staminal tube short; anther pale-yellow; fruits black, enclosed in persistent calyx and epicalyx.

*Flowering and Fruiting: May-June*

*Specimens Examined: A. S. College, Srinagar; Bhellum, 450*

*Distribution: India (Jammu and Kashmir, Himachal Pradesh); Western Himalayas and Pakistan.*

</tbody>
</table>

Annual pubescent herbs; stem decumbent, clothed with stellate hairs; leaves alternate, simple; flowers shortly stalked; petals pale purple, longer than calyx; stamens numerous, monadelphous; fruit breaking into as many as the number of carpels.

**Flowering and Fruiting:** May-June

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 239

**Distribution:** India (Jammu and Kashmir); North Africa; South & West Asia. Nativity S. Europe.

Annual more or less pubescent, erect herbs; stem upto 1 m tall; leaves orbicular, 2.5-7.5 cm across, lobes narrow, middle one the largest; flowers large stalked, bracteoles ovate; petals 5, notched at apex, purple, darkly streaked at base; fruits enclosed in persistent calyx.

**Flowering and Fruiting:** May-June

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 670

**Distribution:** India (Jammu and Kashmir); Pakistan; W. Europe; North Africa and Asia.

Annual erect, stellately pubescent herbs, 1-1.4 m tall; leaves orbicular, cordate, brachioles narrow, acute; flowers purple, nearly twice as long as calyx; flowers nearly sessile; fruits enclosed in persistent calyx, ultimately separating from calyx.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 879
Distribution: India (Jammu and Kashmir), Temperate Himalayas; China; Europe; Asia; Ethiopia and Egypt.

**MALVASTRUM A. Gray, nom Cons.**

Annual, erect or suberect 30-70 cm tall, stellately hairy herbs; leaves ovate, or oblong, lanceolate, apex acute; flowers axillary; calyx lobed up to middle, ovate, acute; petals yellow, obovate, slightly curved at apex; fruit bristly, spinous or horned.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 451

**Distribution:** India (Jammu and Kashmir); America; Tropics of both the Hemisphere and Australia.

---

**15. ZYGOPHYLLACEAE**

**TRIBULUS L.**

Procumbent, prostrate, hairy, annual or biennial herb. Stem slender, prostate, branched, nodes swollen, slightly purplish and hairy. Leaves with 4-7 pairs of unequal leaflets; leaflets sub-sessile and mucronate. Flowers yellow pseudo-axillary. Stamens 5 or 10. Fruits schizocarpic, breaking into 4-6 cocci and each coccus with two sharp divaricate spines

**Flowering and Fruiting:** June-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 891

**Distribution:** India (Jammu and Kashmir); Pakistan; Africa; South Europe; North Australia and Tropical and subtropical parts of the world.

Parts used: Seeds, fruits

Ethnobotanical utility: Seed decoction is administered as diuretic. Dried and powdered fruits are taken orally with milk and honey as a treatment for male impotency.

ERODIUM L.’ Hér. ex Aiton

Annual, more or less viscidly glandular pubescent herbs; stem branched from the base, joints swollen; leaves opposite, 3-10 cm, pinnately divided, leaflets pinnatifid, acute, sometimes lobed; flowers purple in stalked, axillary, 2-10 flowered per umbel; sepals 5, acute, minutely awned; petals 5, unequal with 5 alternate glands; carpel pitted at top, slightly silky on inner surface.

Flowering and Fruiting: April-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 317

Distribution: India (Jammu and Kashmir); Pakistan; Russia; China; North Africa; South-West Asia and Europe.

Annual or biennial usually glabrous herbs, often turning light red; stem slender, erect, or diffuse; leaves orbicular, 2.5-5 cm across, 5-7 lobed, shining, segments toothed; flowers pink, 1-1.2 cm across; calyx 5, angled, erect, acute; petals 5, entire; ovary distinct, smooth, styles 5,

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; *Bhellum*, 285

*Distribution:* India (Jammu and Kashmir); China; Pakistan; N. Africa; Temperate and tropical regions.

Annual herbs; stem diffuse, softly villous, glandular; leaves orbicular, 5-9 lobed; inflorescence in axillary peduncles; sepals 5, green; petals 5, purplish pink, notched at apex; maricaps almost spherical.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; *Bhellum*,

*Distribution:* India (Jammu and Kashmir); N. Africa; Europe; Russia; Taiwan. Native to Afghanistan.

Annual diffused herbs; stem glandular pubescent; leaves suborbicular or reniform, 10-30 across, margin pinnatifid, 5-7 lobed; flowers bracteate, bracts ovate-lanceolte, hairy; sepals ovate-oblong, glandular pubescent; corolla lilac or pink, petals slightly exceeding the sepals; maricarps appressed pubescent; seeds oblong, glabrous.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; *Bhellum*, 756

*Distribution:* India (Jammu and Kashmir), Nativity Asia, Pakistan, Nepal Europe and introduce in N. America

Annual erect or spreading glandular hairy herbs; stem branched from the base; leaves 3-4.5 cm across, 5-7 lobed, usually red dotted below the notch; petiole elongate, 8-12 cm long; flowers 2-3 in axillary slender peduncles; pedicle reflexed in fruits; fruits 1-2 cm long; seeds brown.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 289

**Distribution:** India (Jammu and Kashmir); Afghanistan; Pakistan; W. Asia; N. Africa; Tajikistan; Turkmenistan and Uzbekistan.

Perennial hairy herbs; rootstock thick; stem robust, erect; leaves orbicular, 5-13 cm, palmately 3-5 lobed, segments triangular, acute, irregularly toothed; flowers bluish-purple, 3-5 cm across; sepals abruptly pointed; petals notched at apex; stamens 10, filaments flattened at base; ovary 5-carpellary, styles 5; seeds smooth.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 145

**Distribution:** India (Jammu and Kashmir); Nepal; Pakistan and Afghanistan.

17. BALSAMIACEAE

**IMPATIENS L.**

Annual branched herbs; stem flexuose, grooved, 15-45 cm tall; leaves elliptic, ovate, margin serrate to crenate, base glandular, stipitate; inflorescence racemes; flowers white, zygomorphic, lip boat-shaped, spur minute; capsule erect, cylindrical or subclavate.

**Flowering and Fruiting:** May-June

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 453

**Distribution:** India (Jammu and Kashmir); West Temperate Himalays and Central Asia.
18. OXALIDACEAE

**OXALIS L.**

An annual or perennial procumbent herb, rooting at joints. Leaves alternate; leaflets 3, pale-green, oblanceolate. The leaves have inconspicuous stipules at the base of each petiole. Flowers small, long-stalked, axillary, regular; petals yellow, twice as long as calyx; capsule shortly-beaked, tomentose and cylindrical. The fruit is a narrow, cylindrical capsule.

*Flowering and Fruiting*: November-June

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 242

*Distribution*: India (Jammu and Kashmir); Nativity S. Europe; Cosmopolitan, throughout the warm parts of the world.

Parts used: Whole plant

Ethnobotanical utility: Chewing of fresh leaves checks toothache and halitosis. Leaf juice is used as eyedrop to cure cataract. Plant extract acts as blood purifier and diuretic. Fresh leaf juice soothes eye inflammation, counteracts intoxication as an antidote.

19. SIMAROUBACEAE

**AILANTHUS** Desf.

Deciduous trees; leaves upto 80 cm long, leaflets usually 1-3 pairs of glandular teeth; petals wooly-tomentose within; filaments longer than anther lobes; samara twisted at the top.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 899

*Distribution*: India (Jammu and Kashmir); Pakistan; China and Temperate and subtropical regions of the world.
20. CELASTRACEAE

**EUONYMUS L.**

*Euonymus hamiltonianus* Wall. in Roxb., Fl. Ind. ed. 1, 2: 403. 1824; Lawson in Hooker f., FBI. 1: 612. 1875.

Glabrous shrubs or trees; leaves thin, membranous, ovate-oblong, margin minutely toothed; inflorescence axillary cymes; calyx with 5 sepals; petals 5, oblong, lanceolate, greenish-white; capsule deeply 5-lobed.

*Flowering and Fruiting:* May-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 454

*Distribution:* India (Jammu and Kashmir); West Himalayas; Russia; Nepal; Afghanistan; Pakistan; Thailand and China.

21. MELIACEAE

**MELIA L.**

A large tree with straight trunk; leaves bi or tri pinnately compound, leaflets ovate, 9-13, sub-opposite, obliquely lanceolate, serrate; flowers white, or pale purple, honey-scented, on short slender panicles; drupe ovoid-oblong, smooth, single seeded, dark-purple when ripe.

*Flowering and Fruiting:* April-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 427

*Distribution:* India (Jammu and Kashmir); Pakistan; China; Burma; Turkey; Iran; Sri Lanka; Thailand; Bhutan; Vietnam and Tropical Australia.

22. RHAMNACEAE

**RHAMNUS Juss.**

Erect, glabrous shrubs; leaves alternate, ovate, sharply toothed, pointe, acute, 3-5 nerved from base; stipule spinous, persistent; flowers stalked, in small axillary glabrous cymes; drupe ovoid.

Flowering and Fruiting: April-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 405

Distribution: India (Jammu and Kashmir); West Himalayas.

CAYRATIA (Baker) Suess.

Climber up to 4 m tall; leaves trifoliolate, 7-9 cm, oblong, leaflets ovate-suborbicular, margin crenate-dentate; flowers pale green or greenish white; calyx 0.5 mm, minute; petals 1.5 mm long; berry obovoid.

Flowering and Fruiting: April-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 292

Distribution: India (Jammu and Kashmir, and throughout other part of India); Pakistan, Sri Lanka, Malaya and China.

A large climber; branchlets terete, nearly glabrous or sparsely pilose; tendrils 5-9-branched, young apex expanded and ball-shaped; leaves simple, 3-5lobed on short branches, or small and unlobed on long branches; blade obovoid, 4.5-17 × 4-16 cm, glabrous above,
abaxially sparsely pubescent, base cordate, margin with rough teeth on each side, apex acute; calyx entire or undulate. Petals elliptic, 1.8-2.7 mm, glabrous; ovary oval; stigma not enlarged. Berry 1-1.5 cm in diam., 1-3-seeded. Seeds obovoid.

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 455

*Distribution*: India (Jammu and Kashmir); Taiwan; Korea and China. Nativity Japan,

**P. semicordata** (Wall.) Planch. in DC. Monogr. Phan. 5: 451. 1887.

Glabrous shrubs, climbing by tendrils on the trees; branches furrowed; leaves digitately compound, leaflets 3, shortly stalked, ovate, sharply toothed, acuminate, upper surface dark, shining; inflorescence cymes, leaf-opposed; flowers yellow; petals 4 or 5; stamens 4 or 5; berry black, 6-8 mm across.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 234

*Distribution*: India (Jammu and Kashmir; Himachal; Uttarakhand; Sikkim); Burma; Thailand; W. China and Pakistan.

**24. ACERACEAE**

**ACER L.**

Deciduous handsome trees; branches light brown, drooping; leaves opposite, pinnately compound, leaflets 3-5, margin coarsely serrate; flowers appearing before leaves, yellowish-green, racemes drooping in spring; stames 4-6; fruits u-shaped samara, brownish.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 901

*Distribution*: India (Jammu and Kashmir; Pakistan; China and Northern America. Native to North America.
25. SAPINDACEAE

CARDIOSPENUM L.

An annual climbing herbs; stem branched, grooved; leaves ternately lobed, lobes toothed; flowers white in axillary long stalked cymes; tendrils near the base; sepals 4, free, concave; petals 4, in unequal pairs, each with a small scale on its inner face; stamens 8, unequal inserted at the base of 3-celled ovary; style 3 parted; capsule globse, membranous, 3-cornered; seeds 3, black, spherical bearing a white heart-shaped excrescence.

*Flowering and Fruiting:* June-July

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 768

*Distribution:* India (Jammu and Kashmir); Africa; America; Sri Lanka; Pakistan; Zimbabwe and Tropical and Subtropical Countries.

26. HIPPOCASTANACEAE

AESCULUS L.

Deciduous trees; leaves 5-9 foliolate; leaflets oblong-oblanceolate or oblong-lanceolate, serrulate, acuminate, glabrous; flowers 2-2.5 cm across, in numerous small terminal, erect, cymes or in narrow panicles; corolla irregular, pinkish white; capsules brown-tomentose, ovoid.

*Flowering and Fruiting:* April-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 460

*Distribution:* India (Jammu and Kashmir, Uttarakhand, Himachal); Pakistan and China

**LATHYRUS L.**

Trailing or scrambling annual. Stem upto 45 cm tall, not winged, glabrous. Stipules foliaceous, broadly ovate, hastate, opposite appressed, rest of the leaf reduced to a tendril. Inflorescence a 1-2-flowered, axillary raceme. Peduncle 1-4 times as long as the stipules. Calyx 3-9 mm long. Corolla bright to pale yellow. Fruit glabrous, 4-6-seeded.

*Flowering and Fruiting:* March-April

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 456

*Distribution:* India (Jammu and Kashmir); Europe; South West and Central Asia and N. Africa.
Parts used: Whole plant
Ethnobotanical utility: Cooked as vegetable.

**LESPEDEZA** Michz.

Undershrub, upto 1 m tall; stem much branched, pubescent; leaves trifoliolate, petiolate, leaflet 8-22 mm, obovate, mucronate, glabrous above, densely silky beneath; stipule linear; inflorescence 2-4 flowered; bracts and bracteoles minute; petals pale yellow; pods silky.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 791

*Distribution*: India (Jammu and Kashmir, Uttarakhand, Rajasthan, Bihar, Assam,); Pakistan; Burma; Pakistan; china; Japan and North Australia.

**LOTUS** L.

Perennial herb, prostrate, ascending or decumbent, branches glabrous, subglabrous to densely pilose. Leaf rachis up to 6 mm long, broadly cuneate-obovate to narrowly obovate or linear-lanceolate, obtuse and apiculate to acuminate. Inflorescence a 3-6-flowered axillary, pedunculate umbel. Bracts sessile, leaf-like. Calyx c. 6 mm long, teeth unequal, glabrous or pubescent. Corolla yellow. Fruit cylindrical, straight, glabrous.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 518

*Distribution*: India, (Jammu and Kashmir, Uttarakhand, Himachal Pardesh); West Himalaya; Pakistan; Nepal; Afghanistan; Iran; Syria; Lebanon; Egypt; Cyprus; Russia; Europe; Mongolia; China; Japan; Korea and Australia

Perennial, erect or prostrate, almost glabrous herbs to 70 cm tall; leaves 3-foliolate, leaflets oblanceolate or oblong minutely dentate; flowers in axillary racemes; calyx 5-toothed, teeth as long as the tube; corolla yellow, twice as long as calyx ca. 10 mm long. Pods 5-7.5 mm dia. falcate or near 1-coiled, glabrous, rarely pubescent.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 148

*Distribution:* India (Jammu and Kashmir), Africa; Temperate and Tropical Asia; Northern and Middle and Eastern Europe; North and South America; Australia.

Annual or perennial. Stem prostrate or ascending, up to 60 cm long, pubescent, hairs simple or glandular. Leaflets obovate, cuneate, retuse to obcordate, apiculate, serrate in the upper half, stipules cordate, dentate. Inflorescence an axillary, pedunculate raceme. Bracts c. 0.5 mm long. Calyx pubescent, teeth almost equal to slightly longer than the tube. Corolla yellow. Fruit curved, sparsely pubescent to glabrescent, black, 1-seeded.

*Flowering and Fruiting:* March-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 300

*Distribution:* India (Jammu and Kashmir, Uttarakhand, Himachal Pradesh); Pakistan; Central Asia; N. Africa; Russia; Afghanistan; Iran; Syria; Turkey; Europe; Ethiopia; Somali; Republic and Kenya.

*Parts used:* Aerial parts
Ethnobotanical utility: Aqueous extract of plant has anti-microbial activities. Leaf extract has laxative properties and is used against constipation.

Annual, prostrate or decumbent herbs, stem decumbent, 15 – 70 cm long; leaves 3-foliolate, leaflets obovate or obcordate, cuneate, denticulate; flowers yellow, 2-6 on top of peduncles; calyx bell-shaped, 5-toothed; corolla yellow, twice as long as calyx; pods 2 to 4-spirally coiled armed with hooked spines or tubercles along the outer margin, many seeded.

Flowering and Fruiting: April-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 208

Distribution: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand); Throughout the world except for tropical regions and deserts. Native of Europe.

**MELILOTUS** Mill.

Annual erect slightly pubescent herbs; stem 1.5 m tall or more; leaves pinnately compound, leaflets narrowly oblong, obovate, serrat towards upper parts; stipules narrowly lanceolate, entire; flowers 4-12 cm long axillary racemes; calyx bell-shaped, 5-toothed; corolla with wings and keel equal, standard not clawed, white; pods reticulately veined, longer than calyx, glabrous.

Flowering and Fruiting: March-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 218

Distribution: India (Jammu and Kashmir); Pakistan; Tibet; Persia; Afghanistan; C. Asia; Arabia; Europe; introduced in America and Australia.

An annual herb, 30-45 cm high, with hairless stem. Leaves are odd-1-pinnate, leaflets 3, 2.5 cm, inverted lance-shaped to wedge-shaped-obovate, generally sharply toothed on the broader part, obovate or oblanceolate, stipules linear. Yellow flowers appear in slender, compact racemes that are 1-2 inches in length. Flowers have a sepal cup.

Flowering and Fruiting: March-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 158

Distribution: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand); Pakistan; Orient; Europe; introduced in warmer part of temperate regions.

Parts used: Leaves, seeds

Ethnobotanical utility: Leaf extract is used as aperients. Leaf paste is applied on the skin to remove acne and to make the skin look healthy, glowing and young. Seed powder is taken with lukewarm water to expel intestinal worms and also as antipyretic.

ROBINIA L.

Trees, 10-25 m tall, deciduous. Bark gray-brown to dark brown. Leaves rachis adaxially grooved; leaflets 2-12 pairs, usually opposite or subopposite; leaflet blades oblong, elliptic, or ovate. Racemes axillary. Calyx obliquely campanulate. Corolla white, stipitate. Stamens diadelphous, one opposite to standard free. Ovary linear, glabrous; style subulate. Legume brown or with reddish brown stripes, calyx persistent. Seeds brown to dark brown, glossy.

Flowering and Fruiting: April-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 267

Distribution: India (Jammu and Kashmir); Pakistan; Northern America; Armenia; China; Georgia; Japan; Korea; Cyperus; Australia and Europe.

Parts used: Leaves

Ethnobotanical utility: Dried leaf powder is styptic. Leaf decoction is anti-spasmodic and relieves acidity and dyspepsia. Pinch of flower powder is taken with water to cure gastritis.

*Trifolium hybridum* L.

Annual glabrous herbs, upto 60 cm tall; rootstock creeping; stem, hollow, branched; leaves trifoliolate, leaflets obovate, base wedge shaped, apex rounded, margin toothed, glabrous; stipules oblong, large, united to one third of length united to leaf-stalk; flowers on heads, white tinged pink becoming brown with age; calyx 5-toothed, teeth sharply narrow, glabrous; corolla papilionaceous, purple; stamens diadelphous, upper one free, nine united in a sheath, split at top; ovary globular, style slender, glabrous; pods ovoid, minute, indehiscent, 3-4 seeded.

*Flowering and Fruiting:* April-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 392

*Distribution:* India (Jammu and Kashmir); Russian; Central Asia; Continental Asia; Scandinavia Mediterranean regions; Europe and Subtropical Countries.

Perennial herbs. Stems numerous from crown, erect or ascending. Leaves palmately 3-foliolate, basal and cauline. Flowers 30-70, in dense globose or ovoid, terminal, sessile to shortly pedunculate heads. Calyx slightly pubescent or glabrous. Corolla purple, rarely pink or white, standard spatulate, apex rounded, retuse. Ovary elliptic. Legume ovoid. Seed 1, yellow or brown, ovoid.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 395

*Distribution:* India (Jammu and Kashmir); West Asia; North-West Africa; Europe and Pakistan.
Ethnobotanical utility: Tea prepared from leaves is used as expectorant against whooping and dry cough. Plant extract is taken orally as anti-spasmodic.

*Flowering and Fruiting*: March-May

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 127

*Distribution*: India (Jammu and Kashmir); Pakistan and Europe

Ethnobotanical utility: Whole plant extract is taken as blood purifier, and as a cure for arthralgia.

Annual or biennial herbs; stem hollow, 30-60 cm tall; leaves trifoliolate, leaflets obovate, longer than broad; fruiting heads smooth, globular, calyx 5-toothed, cottony or pilose; corolla papilionaceous; stamens diadelphous, one free, nine jointed into a sheath; ovary globose, style slender; pods ovoid, indehiscent.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 200

*Distribution*: Naturalized in Jammu and Kashmir; India; Temperate Asia; Africa; Europe, Native of Europe.

An annual, strongly scented, robust herb with little branching. Leaflets 3, obovate, smooth and toothed. Flowers yellow, axillary, 1-2 and without stalks. Fruit a pod, long, sickle-shaped with a persistent beak. The dried plant gives a peculiar odour which makes this highly valuable for culinary use

*Flowering and Fruiting:* March-April

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 115

*Distribution:* India (Jammu and Kashmir); Asia; Europe; Pakistan and naturalized elsewhere.

Parts used: Seeds

Ethnobotanical utility: Seeds deep fried in mustard oil are used as a poultice to curb arthralgia. Seeds kept overnight in curd and consumed on an empty stomach are effective in diabetes.

---

 perennial erect herbs; root-stock woody. Stem much branched, glabrous or rarely sparsely hairy. Leaflets 0.5 – 1.8 mm long, 0.8 – 2 mm broad, glabrous above, hairy or glabrescent beneath; petioles 0.4 – 1 cm long; stipules up to 1 cm long, dentate, acuminate.

Inflorescence many flowered racemes; pedicel about 2.5 cm long; calyx sparsely pubescent; teeth ca 2 mm long; corolla 0.5 – 1 cm long. Pods 1 – 1.6 cm long, sickle shaped, transversely veined, glabrous.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 667

*Distribution:* India (Jammu and Kashmir); Temperate and Tropical Asia.

---

Annual, prostrate or ascending herbs. Leaflets 0.5 – 1.2 cm long, 0.3 – 0.9 mm long, oblong, dentate. Flowers yellow, in axillary racemes; calyx ca 6 mm long; teeth as long as the tube; corolla ca 7 mm long. Pods 4 – 7 cm long linear, many seeded.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 505

*Distribution:* India (Jammu and Kashmir); Asia and Russia.

**CRATAEGUS L.**

A large glabous spiny shrub; leaves narrowly oblong, 2.5-5 cm long, shortly stalked, margin crenate, apex obtuse; flowers white in corymbs; calyx tube bell-shaped, adnate to ovary; corolla with 5 orbicular petals; stamens numerous; carpels 5, distinct, styles 5, stigmas capitate; fruits drupe.

*Flowering and Fruiting:* May-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 137

*Distribution:* India (Jammu and Kashmir); Australasia; Northern America; Africa; Russian Federation; Georgia; Iraq; Iran; Israel; Lebanon; Turkey; Cyperus; Egypt; and European countries.

**FRAGARIA L.**

Perennial herbs, often stoloniferous. Leaves mostly radical, alternate, petiolate, stipulate. Lamina 3-foliolate or occasionally pinnately 5-foliolate. Inflorescence erect, terminal, cymose, few flowered, rarely solitary. Flowers bisexual (or sometimes unisexual on

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 837
Distribution: India (Jammu and Kashmir); West Asia; Europe and East of N. America.
Parts used: Leaves, fruit
Ethnobotanical utility: Topical application of fruit juice cures sun burns and blemishes. Leaf extract is antipyretic. Fruits are eaten as such to relieve dyspepsia and also act as aperient.

GEUM L.

Perennial herbs, 20-50 cm tall; rootstock rhizomatous; leaves compound, leaflets closely toothed or serrate, pubescent on both the surfaces; inflorescence in long stalked terminal cymes; stamens many, filaments jointed; style elongate, terminal; achenes in globose heads, hooked at tips.
Flowering and Fruiting: May-June
Specimens Examined: A. S. College, Srinagar; Bhellum, 261
Distribution: India (Jammu and Kashmir); Europe and Middle East.

POTENTILLA L.

Annual hairy herbs; stem many from the base; leaves pinnately compound, leaflets 3-9, thily pubescent on both the surfaces; flowers solitary axillary; calyx tube 5-lobed; corolla with 5 petals, petals shorter than sepals; styles short, lateral; achenes glabrous.
Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 283
Distribution: India (Jammu and Kashmir); Pakistan; Naturalized elsewhere.

</table>

Straggling, large shrub; stem armed with recurved prickles; leaves pinnately 3-foliolate; leaflets orbicular, or obovate, thick, margin closely serrate; flowers white, 12-15 mm across; drupes yellow, many borne on villous receptacles.

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum,
Distribution: India (Jammu and Kashmir, Himachal); Temperate Asia; Nepal; Philippines; Sri Lanka; Thailand and Bhutan.

Glabrous or slightly pubescent; stem woody rhizome; prickles few slender, straight; leaflets 3, rhomboid-ovate, somewhat lobed, acute, doubly toothed, lateral sessile, base cuneate; petiole slender; stipule linear, oblong; flowers white, 1-1.4 cm across; sepals 5, ovate, lanceolate, acute; petals 5, white; fruits a large scarlet drupe.

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 665
Distribution: India (Jammu and Kashmir); Temperate Asia and Europe.

Erect or suberect, armed rambling shrub, twigs angular tomentose; prickles stout, recurved; leaves compound, leaflets usually 3, sometimes 5, ovate, elliptic or obovate; inflorescence in terminal panicles; petals 5, pink, exceeding the length of sepals; fruitlets yellow turning black.

Flowering and Fruiting: April-May
Specimens Examined: A. S. College, Srinagar; Bhellum, 559
SIBBALDIA L.

Perennial tufted herbs; stem 10-30 cm tall; leaves digitately compound, leaflets 3, wedge shaped, base cuneate; inflorescence in corymbs; flowers yellow; sepals 5; petals 5, alternating with sepals, rarely opposite; stamens 10; carpels numerous; achenes hard, glabrous.

*Flowering and Fruiting*: May-June

*Specimens Examined*: A. S. College, Srinagar; *Bhellum, 913*

*Distribution*: India (Jammu and Kashmir); Africa; Temperate and tropical Asia; Australasia; Northern America; Pacific countries; Southern America.

29. SAXIFRAGACEAE

BERGENIA Moench.

Perennial erect herbs; rootstock think; stem short; leaves a few from the base, glabrous on both the surfaces, margins ciliate; inflorescence in one sided racemes; flowers purple-pink; stamens 10; carpels 2; capsule ovate-oblong; seeds brown.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; *Bhellum, 522*

*Distribution*: India (Jammu and Kashmir); Temperate Himalayas; Bhutan and Afghanistan.

Perennial erect or prostrate herbs; stem terete, 30-150 cm tall; leaves sessile, opposite, broadlly lanceolate, hairy or tomentose; inflorescence in raceme; calyx tube united with ovary; petals 4, erect, notched, pink-purple; stamens 8; ovary 4-celled; stigma distinct; capsule many seeded.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 517

*Distribution:* India (Jammu and Kashmir); Africa; Temperate Asia; Nepal; France; Germany; Hungary; Portugal; Spain; Romania and Netherland.

Annual pubescent herbs; stem erect or ascending; leaves thin, lanceolate, tapering at both the ends; flowers in axillary racemes, pink; calyx tune 4-lobed; corolla 4-lobed, pink; ovary 4-celled; capsule 4-angled, many seeded.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 523

*Distribution:* India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand);
**OENOTHERA L.**

*Oenothera rosea* Soland in Ait., Hort. Kew ed. 1, 2 : 3. 1789; Clarke in Hooker f., FBI. 2 : 582. 1879.

Perennial herb, flowering the first year, stems ascending, 1-4 dm tall, densely strigillose, rarely mixed with sparse villous hairs. Leaves subentire or sinuate-pinnatifid, elliptic or rarely narrowly ovate. Flowers opening near sunrise; mature buds erect. Floral tube 4-8 mm long. Petals rose to rose-purple, obovate. Capsule clavate. Seeds in several indistinct rows in each locule.

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 315

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand); Pakistan

*Parts used*: Leaves

*Ethnobotanical utility*: Decoction of fresh leaves is taken orally against renal colic.

---

**31. ARALIACEAE**

**HEDERA L.**

Perennial climbers, with aerial roots. Leaves simple, lanceolate to ovate to variously lobed, glabrous; base cordate to rounded or cuneate; apex sub-acute to obtuse. Flowers yellow; pedicels 7-12 mm long, pedicels and peduncles hairy. Calyx entire. Anthers 1-2 mm long. Stylar column c. 1 mm long, persistent. Fruit a berry

*Flowering and Fruiting*: May-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 141

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand); Pakistan, Africa, Temperate Asia and Europe.

*Parts used*: Berries, leaves

*Ethnobotanical utility*: Ripe berries are eaten as aperient. Leaf decoction is used as hair wash to get rid of hair lice. Dry leaves are used to cure sores.

**CHAEROPHYLLUM L.**

Perennial erect herbs; stem over 50 cm tall, pubescent; leaves pinnately compound, segments linear-lanceolate; flowers white in umbels; calyx teeth obsolete; corolla with 5 petals; stamens 5; fruits cylindric, glabrous;

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 220

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand); Pakistan; Afghanistan; Iran and Iraq.

---

**CONIUM L.**

Perennial, erect herbs; roots spindle shaped; stem hairy, hairs reflexed; leaves 2-3 pinnate, segments lobed or toothed; flowers white in umbels; petals white; fruits cylindrical, 6-9 mm long.

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 657
**Distribution**: India (Jammu and Kashmir); Afghanistan; Iran; Iraq; Armenia; Georgia; Pakistan; Middle Asia; Northern America; Australasia; S. America and Russian Federation.

**DAUCUS L.**

Biennial, erect herbs; root-stock thick, conical, stem grooves, 1 m tall; leaves pinnately compound, lobed or entire, segments lanceolate, pubescent above, densely tomentose beneath; flowers in umbels, white or cream-coloured; calyx teeth obsolete; corolla with 5 petals; fruit obovate, dorsally compressed.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 432

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand); Western Himalayas and Pakistan.

**SCANDIX L.**

Annual pubescent or glabrescent herbs; stem 20-40 cm tall; leaves compound, segments narrow; inflorescence in umbels; flowers white, bisexual or staminate; fruits clavate, oblong, redges blunt, mericarps slightly bristly.

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 256

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh, Uttarakhand) and Pakistan

**SIUM L.**

Glabrous herbs, about 1 m tall; leaves pinnate, pinnae ovate, serrate; inflorescence umbels; flowers bracteates, minute, white; calyx teeth obsolete; corolla with 5 petals; fruit ovoid, oblong, furrowed.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 176
Distribution: India (Jammu and Kashmir); Western Himalayas; Poland; Germany; Ukrain; Norway; France; Spain; United Kingdom; Kazakistan; Russian Federation; Russia and Western Siberia.

**TORILIS Adans.**

Annual erect hispid herbs; stem upto 70 cm tall, furrowed; leaves pinnately compound, segments oblong, inflorescence umbels; flowers white; calyx 5-lobed, lobes obsolete; corolla with 5 petals; stamens 5; fruits ellipsoid, narrowed upwards, primary redges spongy, tubercled.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 679

*Distribution*: India (Jammu and Kashmir); Japan; China; Bhurma; Formosa; Korea and Sumatra.

**LONICERA L.**

Scandant, spreading shrubs; leaves opposite, ovate, cordate, pilose on both the surfaces, margins ciliate; flowers pink, yellow or reddish in axillary pairs, rarely 3 in terminal cymes; calyx tube 5-toothed; corolla distinctly 2-lipped; stamens 5, exserted; ovary 2-3 celled, style long, stigma capitate; fruit a berry, distinct or united in pairs.

*Flowering and Fruiting*: April-June
Specimens Examined: A. S. College, Srinagar; Bhellum, 272

Distribution: India (Jammu and Kashmir); Pakistan; Europe and N. Africa

VIBURNUM L.

Viburnum opulus L.

Shrubs, deciduous, much branched 2-4 m tall; leaves opposite; inflorescence in corymbose cymes; flowers cream coloured or pretty pink or white tinged with pink, marginal flowers sterile; calyx 5-toothed; corolla campanulate, 5-lobed; fruit a drupe.

Flowering and Fruiting: March-April

Specimens Examined: A. S. College, Srinagar; Bhellum, 965

Distribution: India (Jammu and Kashmir); China; Temperate Asia; Mongolia; Korea; Russia; Russian Federation; Japan and Eastern Siberia.

WEIGELA Thunb.

Showy, deciduous shrub; stem branched, branches arching; leaves opposite, oblong, margin toothed; inflorescence in corymb; flowers pale-pink, funnel-shaped, 3 cm long; corolla lobes often unequal; capsules elongate, narrow, woody, dehiscing by 2-valves from the top.

Flowering and Fruiting: April-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 462

Distribution: India (Jammu and Kashmir) and N. China and other parts of East Asia

34. VALERIANACEAE

VALERIANA L.

Perennial herbs; stem 20-70 cm tall; rootstock thick, stout, fibrous, aromatic; stem many from the base; leaves radicle, long petioalte, ovate-cordate, margin sinuate or crenulate; inflorescence in dense corymbs or cymes; flowers white tinged with pink; corolla 5-lobed; stamens 3; achenes shaggy.
Flowering and Fruiting: March-April
Specimens Examined: A. S. College, Srinagar; Bhellum, 492
Distribution: India (Jammu and Kashmir); Afghanistan; Pakistan; Temperate and tropical Asia; China and Myanmar.

Annual trailing herbs; stem branched, angular, beset with minute recurved prickles; leaves in whorls of 6-8, linear or narrowly lanceolate, midribs and margins minutely prickly; flowers white tinged with green; fruits clothed with hooked bristles.

Flowering and Fruiting: March-April
Specimens Examined: A. S. College, Srinagar; Bhellum, 450
Distribution: India (Jammu and Kashmir); Pakistan; Nepal; Iraq; Victoria; Libia and United States of America.

Annual erect, 15-40 cm tall herbs; stem 4-angular, smooth; leaves subsessile, 6-8 in a whorl, 2-5 cm long, lanceolate, obovate or narrowly elliptic, acute or apiculate, margin
scabrid, glabrous; flowers white, 2.5-3.5 mm across; pedicel 5 mm long; fruits upto 4.5 mm across, clothed with hooked hairs.

*Flowering and Fruiting:* March-April

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 892*

*Distribution:* India (Jammu and Kashmir); Pakistan; Libia; Mexico; Canada; Greenland; Iraq and Victoria.

**RUBIA L.**

Perennial climbing herbs; stem 4-angular, angles sharp, prickly or scabrous; leaves usually in whorls of 4, cordate, ovate, margins prickly, apex acuminate; inflorescence in numerous axillary cymes; flowers white or cream-coloured; corola 4-lobed, lobes recurved; stamens 5; carpels 2, united, styles 2, united at base, stigam capitate; fruit succulent, globose, purple or balck when ripe, seeds 2, minute.

*Flowering and Fruiting:* March-April

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 206*

*Distribution:* India (Jammu and Kashmir); Zimbabwe; Africa; Kenya; Sudan; Awetzerland; China; Afghanistan; Veitnam; Indonesia; Philippines and Pakistan.

ACHILLEA L.

Perennial herb. Stem 15-60 cm high. Leaves sessile, pinnately compound, radial leaves petiolate. Head radiate, 5-7 mm in diameter, crowded in compound corymb. Ray florets reflexed, white. Achenes oblong, pappus absent

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 136

Distribution: India (Jammu and Kashmir); N. Asia, Europe and America
**AGERATUM L.**

Annual herb, about 90 cm high, stem erect, branched, and hairy, green or purple; leaves opposite but upper leaves may be alternate, ovate, hairy on both sides and stalked; inflorescence heads mauve, pale-blue or faintly pinkish-purple, fragrant, discoid, in terminal corymbs; pappus scales and achenes angled and black.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 521

*Distribution*: India (Jammu and Kashmir) and all Tropical countries of the world.

**ARCTIUM L.**

Erect, coarse herbs; stem branched, furrowed; leaves alternate, broadly ovate or cordate, margin minutely toothed, hoary; involucral bracts many serriate, spiny, hooked, outer free, inner connate; heads homogamous, upto 3.5 cm across; disc florets 5-fid, purple; stamens 5, anther cells sagittate, purple; style arms 2; pappus hairs short; achenes oblong, trigonous.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 128

*Distribution*: India (Jammu and Kashmir); Mediterranean region; British Isles; China; Middle East; Russia and Japan.

</table>

Annual or perennial glabrous herbs; stem 1-2 m tall; leaves linear-oblong, 6-12 cm long, pinnate, llobes small, oblong, toothed; heads 3-4 mm in dense panicles; bracts erect, glabrous, obovate-oblong, acute; achenes minute.

*Flowering and Fruiting*: March-May

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 516

*Distribution*: India (Jammu and Kashmir); Temperate Asia; Nepal; Pakistan; Afghanistan; Europe and Russian Federation.

Perennial, erect or ascending aromatic woody shrubs; stem branched, branches grooved; glabrous; leaves pinnatipartite, segments lanceolate, oblong, margin entire, glabrate above, densely tomentose beneath; heads with 5-11 florets; achenes minute.

*Flowering and Fruiting*: March-May

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 708

*Distribution*: India (Jammu and Kashmir); Nepal and Temperate Himalayas

**BELLIS L.**

Perennial herbs; leaves radical, obovate, slightly crenate, pubescent; heads on elongate pæduncle of variable length; bracts green, narrowly oblong; rayflorets white tinged with pink; disc florets cream coloured; achenes pubescent.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 155

*Distribution*: India (Jammu and Kashmir); Europe, Zimbabwe and Pakistan.

**BIDENS L.**

Key to Species

| 1 | + | Leaves bipinnate; pappus with 2-4 bristles | ------------------------ | Bidens bipinnata |
|   | - | Leaves unipinnate; pappus usually with 2 bristles | ------------------------ | B. tripartita |

Erect, branched herbs; stem 4-angular 25-100 cm tall; leaves opposite, towards base and alternate above, 2-3 pinnate or pinnatifid; segments ovate, acuminate; heads yellow; involucral bracts 2-seriate; rays absent; disc florets bisexual, 5-fid; stamens sagittate at base; achenes 4-angular; setae retrorsely bristly.

**Flowering and Fruiting:** April-August

**Specimens Examined:** A. S. College, Srinagar; **Bhellum, 729**

**Distribution:** India (Jammu and Kashmir); Northern America and Southern America.

Annual almost glabrous herbs; stem 4-angular; leaves divided into 3 main segments; segments lanceolate, lobulate, margin sharply toothed, base ciliate, otherwise glabrous; heads nodding; involucral bracts in two rows, outer broader than inner, shining; disc 5-lobed, dull-yellow, brown; achenes flattened with 2 bristles, barbs reflexed.

**Flowering and Fruiting:**

**Specimens Examined:** A. S. College, Srinagar; **Bhellum, 759**

**Distribution:** India (Jammu and Kashmir) and Europe

**CALENDULA L.**

Annual viscid pubescent herbs; stem erect, or decumbent brached from the base; basal leaves spathulate, upper oblong, or lanceolate, remotely sinuate, teeth dark tipped; heads yellow; achenes curved, muricate on dorsal side.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; **Bhellum, 433**

**Distribution:** India (Jammu and Kashmir); Pakistan; Europe and N. Africa.
**CARDUUS L.**

Annual or biennial, unbranches, stout herbs; stem winged, spinous grooved; leaves 15-30 cm long, pinnately lobed; margin wavy, spiny; flowers many in nodding heads; involucral bracts lanceolate, awl-shaped, ending in erect or reflexed spines; pappus united at base, soon falling off; disc florets deeply 5-lobed; anther sagittate at base; style arms 2, short blunt; achenes quadrangular, smooth, pale-brown.

*Flowering and Fruiting:*

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 999

*Distribution:* India (Jammu and Kashmir); Afghanistan; Pakistan and Nepal.

**CARPESIUM L.**

Perennial, erect herbs; stem branched, branches slender; leaves subsessile, ovate-lanceolate, 5-15 cm long, narrow at both ends, margin entire, serrate, glabrous on upper surface, pubescent beneath on ribs, glandular, glands pale-yellow, shining; heads numerous, in remote secund, discoid, 4-6 mm across; outer involucral bracts green, inner scarious; florets bisexual 5-toothed; anther bases sagittate; achenes elongate with glandular beak, minutely ribbed.

*Flowering and Fruiting:*

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 736

*Distribution:* India (Jammu and Kashmir); China and Russia.

**CENTAUREA L.**

*Key to Species*

| 1 | + Phyllaries spine tipped --------------------------------- *Centaurea iberica* |
| - | Phyllaries not spine tipped --------------------------------- *C. cyanus* |

83

Annual or biennial erect, branched, medium sized cottony herbs; basal leaves oblong, pinnately lobed, upper linear lanceolate; heads obovoid; involucral bracts with margin scarious; outer florets with dark blue florets; heads solitary or clustered, densely bristly or cottony; achenes oblong, somewhat 4-angular, shining, silky; pappus none.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellung, 737

*Distribution:* India (Jammu and Kashmir); Russia; Europe and Northern America.

Annual or perennial, much branched herbs; stem 15-60 cm tall or more, branches divaricate; basla leaves runcinate-lyrately pinnatisect, lobes ovate or lanceolate, denticulate at margins, upper sessile or subsessile; heads 1 cm across; involucral bracts with margin scarious, spine tipped; achenes 3-3.5 mm long.

*Flowering and Fruiting:* May-August

*Specimens Examined:* A. S. College, Srinagar; Bhellung, 434

*Distribution:* India (Jammu and Kashmir); Pakistan; China; S.-W. Asia; Russia and Europe.

**Cichorium L.**

Annual or perennial herbs; rootstock thick; stem stiff, angular, branched, branches spreading; leaves in rosette at base, stalked, runcinate, more or less bristly underneath, upper sessile exutes white milky; involucral bracts ovate, spreading, inner shorter than outer; heads ligulate, blue; cypselae fringed with bristles.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellung, 933

*Distribution:* India (Jammu and Kashmir); South-West Asia; Pakistan; Europe and Northern America.

Key to Species

|   | + Florets dingy purple ------------------------------- C. arvense | - Florets yellow, cream coloured or white ------------------------------- C. wallichii |

Erect branched herb; stem 1 m tall or more; stem somewhat cottony upwards; leaves oblong, 6-20 cm long, sinuate, pinnatifid, white tomentose beneath; heads pale-purple, 2-2.5 cm long; involucral bracts green tinged purple, outer spiny, spreading; achenes 3-3.5 mm long, brown; pappus light brown.

Flowering and Fruiting: June-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 387

Distribution: India (Jammu and Kashmir); Afghanistan; S.-W. Asia; Russia; Japan; Korea; Mongolia; Nepal and Europe.

Annual or perennial, erect herbs; stem robust, fleshy, grooved, hollow; leaves oblong undulate, lobes spiny, radical 30 cm long, upper smaller, 10-20 cm long, glabrous or cottony beneath; heads erect, 2-4 cm across, sessile or shortly peduncled; involucral bracts narrow, oblong, rigid, spine tipped, spreading; achenes brownish white; pappus light-brown.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 494

Distribution: India (Jammu and Kashmir); Afghanistan; China and Nepal.

CONYZA Less.

Key to Species

|   | + Plants appressed hairy; heads 1-12 mm across----------------- Conyza bonariensis |
|   | - Plants velvety-hairy or glabrous; heads 5-7 mm across ------------------------------- 2 |
| 2  | + Ray florets pinkish purple ----------------------------------------- C. canadensis |
|   | - Ray florets white ------------------------------------------------- C. stricta |

Annual or biennial herbs; stem branched, 0.5-1.5 m tall, hirsute; rootstock thick; leaves oblanceolate, 3-10 cm long, acute; heads 5-10 mm across; involucral bracts 2-4 mm long, hirsute; disc florets purple tipped; achenes 1 mm long; pappus pale yellow.

*Flowering and Fruiting*: April-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 194

*Distribution*: India (Jammu and Kashmir); Afghanistan; Nepal; China; Sri Lanka, Pakistan, Bhutan, Tropical America. Originated in S. Europe.

---

Annual 15-100 cm tall herbs; stem branched above, grooved, hirsute or glabrous; leaves linear or linear-lanceolate, margin or toothed; heads 5-6 mm across; involucral bracts narrow, glabrate, acuminate; ligules pale rosy, purplish; achenes 1 mm long, glabrous; pappus dirty white.

*Flowering and Fruiting*: April-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 797

*Distribution*: India (Jammu and Kashmir); Cosmopolitan; Originated in N. America and now widely distributed in the old world.

---

Annual, 60-100 cm tall herbs; stem branched; leaves linear, oblanceolate, spatulate, margin entire or serrate; heads numerous, 3-4 mm across; involucral bracts linear-lanceolate or oblanceolate, margin scarious, acute; achenes minute; pappus hairs reddish, 1 mm long.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 452
Distribution: India (Jammu and Kashmir); Sri Lanka; Malesia; America; Australia. Pantropic weed of American origin.

**COTULA L.**

Annual procumbent, 5-20 cm tall herbs; stem branches from base; leaves pinnatifid or pinnatisect, segments linear, lanceolate, entire or toothed; heads solitary, 3-4 mm across, yellow; involucral bracts 2-subserriate, oblong, obtuse, margin scarious; outer florets female, fertile; disc florets bisexual, bisexual, tubular, yellow; anther bases obtuse, entire; style arms 2; achenes of margin florets winged and of disc florets minutely winged.

Flowering and Fruiting: April-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 320

Distribution: India (Jammu and Kashmir); E. W. Himalayas; China and N. S. Africa

**COUSENIA Cass.**

Perennial, erect, branched cottony herbs; basal leaves pinnatifid, cobwebby above, densely tomentose beneath, segments lobulate or entire, spinescent at tip; heads solitary, 1.2-6.2 cm across; involucral bracts numerous, numerous, outer ending in stiff, straight spine; inner bracts scarious, shining; florets all alike, disc florets tubular, 5-fid, purplish; filaments glabrous, anther sagittate or auricled; achenes oblong subtriquetrous, many ribbed.

Flowering and Fruiting: June-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 482

Distribution: India (Jammu and Kashmir) and W. Himalayas.

**ECLIPTA L.**

Annual, strigose herbs, rooting at basal nodes; leaves opposite, sessile, narrowly lanceolate, 1.5-8 cm long margin toothed, lamina appressed with hair on both surfaces; heads axillary or terminal, 6-10 mm in dia.; involucral bracts biseriate, ovate, lanceolate, acute, appressed pubescent; ligules 2-dentate, white; ray florets female, fertile or sterile; disc florets bisexual, fertile, achenes oblong, minute.

**Flowering and Fruiting:** July-September

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 953

**Distribution:** India (Jammu and Kashmir) and Cosmopolitan.

---

**GALINSOGA** Ruiz & Pav.

Annual erect herbs; stem much branched, pubescent, 15-15cm tall; leaves opposite, ovate-lanceolate, 2-5.7 cm long, apex acuminate, margin subentire or minutely serrate; heads 4-7mm in dia., held in axillary or subterminal panicles; involucral bracts ovate, oblong, ray florets female, few, equal, white; disc florets bisexual, fertile, tubular; achenes obconic.

**Flowering and Fruiting:** May-July

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 306

**Distribution:** India (Jammu and Kashmir); Tropical America and Cosmopolitan.

---

**HELIANTHUS** L.

Perennial rhizomatous herbs; stem 0.5-2.0 m tall, erect, hispid or hirsute; leaves ovate, lanceolate, margin entire or serrate; phyllaries dark green; heads yellow; ray and disc florets yellow.

**Flowering and Fruiting:** May-July

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 915

**Distribution:** India (Jammu and Kashmir) and Europe.
**LACTUCA L.**

**Key to Species**

| 1 | + | Plants up to 50 cm tall; beak of achenes always twice as long as achene | Lactuca dissecta |
| - | - | Plants up to 200 cm tall; beak of achenes not longer than achene |
| 2 | + | Leaves cordate, deltoid, hastate, up to 15 cm long | L. rapunculoides |
| - | - | Leaves linear-lanceolate, sagittate up to 25 cm long | L. dolichophylla |

Erect herbs, 15-45 cm tall herb, glabrous or pubescent herbs; stems dichotomously branched; leaves entire, lyrate, radical leaves many, sessile, cauline leaves alternate, amplexicaule; head ligulates, corymbose, blue; achenes blackish-brown, compressed, 3-ribbed on entire side; pappus vary, white hairy.

*Flowering and Fruiting:* March - May

*Specimens Examined:* A. S. College, Srinagar; Bhelhum, 393; J & K- Upper Lidder Valley, Gha Shangan, B.M. Sharma 20714 (RRLH)

*Distribution:* India (Jammu and Kashmir Uttaranchal, Sikkim, Darjeeling and Himachal Pradesh); Pakistan; Nepal; Temperate and Tropical Asia; Bhutan, Bangladesh, Nepal, China, Kazakhstan, Kyrgyzstan, Tajikistan, United Arab Emirates and Afghanistan.

Annual, erect herbs; stem simple, slender, 1-1.5 m tall, glabrous except the hispid base; leaves sessile, long, lanceolate, base stem-clasping, apex acuminate, margin entire; heads held in panicles; outer involucral bracts few, inner linear; ligule blue; achenes elliptic or oblanceolate, beak capillary equal or shorter than the body of the achene.

*Flowering and Fruiting:* July-September

*Specimens Examined:* A. S. College, Srinagar; Bhelhum, 718

*Distribution:* India (Jammu and Kashmir); Bhutan; Afghanistan; Nepal; Temperate & Tropical Asia;
**L. rupunculoides** (DC.) Clarke, Comp. Ind. 268. 1876.

Annual or biannual 50-100 cm tall, herb; stem erect branched above; basal leaves cordate or deltoid with margins incurved, hastate, middle and upper ovate, lanceolate, petiole winged; heads terminal panicles; ligule white or purple; achenes fusiform compressed, narrow at both the ends, beak brown; pappus dirty white.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 473

*Distribution:* India (Jammu and Kashmir, W. Himalayas); Afghanistan; China; Pakistan and Nepal.

*Flowering & Fruiting:* August-October

*Distribution:* India (J & K, Himachal Pradesh in Western Himalaya, Maharashtra, Goa, Madhya Pradesh, Bihar), Afghanistan, China, Pakistan, Nepal.

**MATRICARIA L.**

Annual or perennial aromatic herbs; stem much branched, glabrous; leaves 2-pinnatifid or pinnatisect, segments linear, thread-like; heads held in panicles; involucral bracts oblong hemispheric; ray florets female, fertile or sterile, white; disc florets bisexual, fertile, yellow; achenes oblong, dorsally convex, ventrally 4-5 ribbed.

*Flowering and Fruiting:* May-June

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 322

*Distribution:* India (Jammu and Kashmir)

**SENECIO L.**

Annual 20-40 cm tall, herb; stem flexuose, glabrous or thinly clothed with tomentose hairs; leaves alternate, sessile, pinnately lobed, teeth irregular; heads terminal, corymbose; involucral bracts small, black tipped; heads 4-5 mm across; florets discoid, 5-6 mm long; achenes cylindric, 2-2.5 mm long, ribbed.

*Flowering and Fruiting:* May-October

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 124

*Distribution:* India (Jammu and Kashmir, Nilgiri Hills, Assam and Tamil Nadu),
SIEGESBECKIA L.

Erect, velvety undershrub, 20-120 cm tall. Leaves stipulate, filiform, stellate hairy; stellate tomentose. Flowers axillary, solitary or paired or more in terminal branches. Calyx 5-10 mm long. Petals yellow, slightly exceeding the calyx, obliquely obovate. Staminal column, hairy or glabrous. Fruit discoid. Seeds brown to dark brown.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 423

Distribution: India (Jammu and Kashmir); Australia; Asia; Europe and Northern America.

Flowering & Fruiting: October-November

Parts used: Whole plant

Ethnobotanical utility: Decoction of the whole plant is considered diaphoretic, cardiotonic, and also used in rheumatism.

SILYBUM Adans., Nom. Cons.

Erect, stout, upto 1 m tall herbs; leaves sinuatel lobed, 10-60 cm long, somewhat dusted white on upper surface; margin strongly spinous; heads rose-purple; achenes ovoid-oblong, dark brown.

Flowering and Fruiting: May-October

Specimens Examined: A. S. College, Srinagar; Bhellum, 485

Distribution: India (Jammu and Kashmir); Pakistan; Nepal; Europe; introduced in Britain.

SOLIDAGO L.

Perennial, erect, short herbs; stem 0.5-1.5 m or more tall, simple or branched; radical leaves petiolate, ovate or oblong cauline leaves simple, entire; capitula held in axillary
panicles; involucral bracts narrow, acute unequal; ray florets female, yellow; disc florets bisexual style bilobed, lobes equal; achenes puberulous.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 686

*Distribution:* India (Jammu and Kashmir); Pakistan; Nepal and introduced in Asia and Europe.

Annual, erect, glabrous herbs, latex milky white; stem branched, 20-90 cm tall, branches umbellate; leaves lanceolate, pinnatifid, base semiamplexicaule with rounded auricles; heads yellow, held in panicles; involucral bracts seriate, outer smaller; receptacle flat; ligules 5-toothed; achenes obovoid or ellipsoid, muricate.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 148

*Distribution:* India (Jammu and Kashmir); Asia; Europe; Mediterranean region; China; Afghanistan and Bhutan.

Perennial, rhizomatous herbs; stem erect, 70-200 cm tall; leaves often radical; cauline glabrous; heads cylindrical; involucral bracts many seriate, linear lanceolate; ligules yellow; achenes oblong-lanceolate, dark brown

*Flowering and Fruiting:* May-August
**Specimens Examined**: A. S. College, Srinagar; Bhellum, 466

**Distribution**: India (Jammu and Kashmir) and Europe

Annual glabrous, latex milky; stem branched, up to 1 m tall; leaves pinnatifid, base semiamplexicaule, auricles acute, entire, runcinate; capitula homogamous, yellow, in panicles; involucral bracts many seriate, outer smaller; ligule 5-toothed, spreading; achenes ellipsoid, ribbed, muricate between the ribs.

**Flowering and Fruiting**: May-July

**Specimens Examined**: A. S. College, Srinagar; Bhellum, 917

**Distribution**: India (Jammu and Kashmir); Cosmopolitan.

**TAGETES L.**

Annual, erect, strongly aromatic herbs; stem furrowed, 0.4-1.5 m tall; leaves pinnately compound, 10-20 cm long, leaflets lanceolate, oblong, margin conspicuously, midrib prominent underneath; capitula held in panicle; involucral bracts united forming cylindric 10 mm long tube; rayflorets female.

**Flowering and Fruiting**: May-June

**Specimens Examined**: A. S. College, Srinagar; Bhellum, 114

**Distribution**: India (Jammu and Kashmir); naturalized in N. W. Himalaya; Native of America

**TARAXACUM F. H. Wigg.**

Dandelion is a perennial plant growing almost everywhere, which can reach 38 cm in height. This plant has only basal leaves. Each leaf is toothed or lobed. The flower-heads are up to 4.5 cm wide, yellow. The florets number 40 to over 100 per head that are yellow or orange-yellow in color. Blooms first appear in mid spring and continue into early winter.
Seeds are enclosed singly within fruiting bodies and are attached to a long slender stalk that terminates in a parachute-like structure called a pappus.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 486

*Distribution*: India (Jammu and Kashmir); Throughout temperate Himalaya and W. Tibet and temperate region of N. W. Hemisphere.

*Flowering & Fruiting*: March-April, September-October

*Parts used*: Leaves

*Ethnobotanical utility*: Boiled leaves are used as pre and post pregnancy food for ladies. Root decoction is useful against chronic kidney and liver problems. Leaves are cooked as vegetable and given to pregnant ladies at the time of delivery for reducing labour pains and also act as galactagogues. Decoction of leaves is given twice a day post delivery to ladies to overcome anaemia.

**TRAGOPOGON L.**

Annual or biennial, glabrous herbs, milky latex; stem branched, 25-70 cm tall; leaves alternate, linear, upto 25 cm long, apex acute, margin entire; heads solitary, terminal; involucral bracts 8; ligules yellow; achenes 10-16 mm long.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 937

*Distribution*: India (Jammu and Kashmir)

*Flowering and Fruiting*: April-May

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 385

*Distribution*: India (Jammu and Kashmir); Europe; Australia; Africa; West Asia; France and Northern America.
**XANTHIUM L.**

<th>Xanthium spinosum</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- Unarmed shrubs; stem 50-150 cm tall; leaves green on both surfaces</td>
<td>X. strumarium</td>
</tr>
</tbody>
</table>

Annual brached herbs, stem 50-70 cm tall; spines 3-fid, yellow in the axil of leaves, sometimes replaced by leafy fascicles, margins entire, white-grey tomentose on underneath, dark green above; male heads in terminal inflorescence, female solitary, utricles yellow, hooked, spinous.

*Flowering and Fruiting*: June-October

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 135

*Distribution*: India (Jammu and Kashmir); Mexico; Central America; Old and new world; Cosmopolitan.

An annual or perennial herb up to 1.5m tall. Leaves petioled. Flower heads in terminal and axillary racemes, flowers unisexual; male flowers above female below on separate branches, fruits with two mucronate beaks, clothed with hooked prickles. Achenes thick, enclosed in the hardened involucral bracts and clothed with strong hooked spines.

*Flowering and Fruiting*: March-November

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 426

*Distribution*: India (Jammu and Kashmir), Western Himalayas; Central and Southern America; Mexico and Java.

Parts used: Leaves, fruit, whole plant

Ethnobotanical utility: Leaf paste prepared in mustard oil is applied on the head to relieve headache. Topical application of the paste of fruits and/or whole plant in *Sesamum orientale* oil is effective in reducing arthralgia.
**YOUNGIA** Cass.

Annual or perennial herbs; stem slender, hollow, 25-50 cm tall, pubescent; leaves alternate, 5-15 cm long, margin sinuately lobed, lobes toothed, cauline leaves few, smaller; capitula held in corymbgs or panicles; involucral bracts outer ovate, acute, inner oblong or lanceolate, green, acute; receptacle flat; ligules long, spreading; stigma bilobed; achenes fusiform, small, finely ribbed.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 917

*Distribution*: India (Jammu and Kashmir); Asia; Central and South America; Northern America; Africa; Australia and China; Native of Japan.

</tbody>
</table>

Erect, perennial herbs, 15-30 cm tall; leaves radical, peiolate, 1-5 cm long, oval, oblong, or oblanceolate, glabrous, margin entire, cauline leaves linear, sessile; flower solitary terminal; calyx adnate to the ovary, segments 5, linear awn-like, green; corolla 5-lobed; stamens 5; ovary 3-celled, style shorter than corolla, stigma 3-lobed; capsule oblong, contracted at blunt apex.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 946

*Distribution*: India (Jammu and Kashmir); Afghanistan; Bhutan; China; Nepal and Pakistan.

Annual or biennial herbs; stem 50-70 cm tall, erect, robust, reddish brown, bristly hairy; basal leaves alternate, lanceolate, elliptic, 12-15 cm long, margin serrate, upper leaves smaller, sessile, lanceolate; inflorescence racemose; flowers bell-shaped, blue; corolla campanulate, fused petals sharply bent.

*Flowering and Fruiting*: April-June

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 956

*Distribution*: India (Jammu and Kashmir); Originated in S. Europe, Europe and N. America.

### 38. PRIMULACEAE

**ANAGALLIS** L.

Annual erect, or prostrate glabrous, herb; stems slender, erect, branched from the base, branches 4-angled; leaves opposite, sessile, cordate, entire and acute; flowers bright- blue with red base, solitary, axillary; capsule globose, opening by a circumsissible fissure round the middle; seeds 3-angled.

*Flowering and Fruiting*: March-May

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 231

*Distribution*: India (Jammu and Kashmir); West Asia and Europe.

### 39. OLEACEAE

**FORSYTHIA** Vahl.

Deciduous shrubs, 1-3 m tall; leaves opposite, sometimes trifoliolate, with basal pairs of leaflets smaller, elliptic to lanceolate, margin serrate or entire; flowers 1-4, axillary, bright yellow, tinged with orange, stripes, pedent; calyx 2-4 lobed, ciliate; corolla deeply 4-lobed, tube 5-6 mm long, reolute; capsule ovoid, 1-1.5 cm long.

*Flowering and Fruiting*: February-March

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 159

*Distribution*: India (Jammu and Kashmir); Japan; China; America and Canada.

Uses: Flowers produces lactose (milk sugar).

**LIGUSTRUM**

An evergreen, trees or shrubs, bark grey green; leaves opposite, simple, 6-17 cm long, base rounded, glabrous, glossy green, margin entire; flowers bisexual, scented on terminal panicles; calyx 4-lobed; corolla funnel-shaped; 4-lobed; stamens 2, inserted on corolla tube, shorter than corolla lobes; ovary 2-celled, style intruded, stigma bifid; fruit 2-loucular, berry.

*Flowering and Fruiting*: August-September

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 998

*Distribution*: India (Jammu and Kashmir) W. Himalayas; Temperate Asia; Southern Africa; Australia; New Zealand; Southern America.

**SYRINGA** L.

Erect shrubs, about 5 m tall, stem branched; leaves oval, subcordate, acuminate, subcoriaceous, 5-12 x 2-5 cm, glabrous; flowers white and lilac; calyx 4-toothed, farinose; corolla 4-toothed, limb narrowly cylindrical, lobes reflexed; capsule acuminate, smooth, seeds 2, compressed, winged.

*Flowering and Fruiting*: May-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 968
Distribution: India (Kashmir); W. Asia; S. E. Europe, distributed in temperate parts of the world.

40. APOCYNACEAE

NERIUM L.

An erect evergreen shrub, branches glabrous with milky juice, young branches green; leaves linear-lanceolate, tapering at both ends, acuminate, thick coriaceous, midrib prominent, nerves numerous; flowers white, pink or dark red, single or double in cultivated, form, fragrant 3-4 cm across, bracts small. Calyx divided into 5 linear, acute lobes, hairy with gland at the base inside. Corolla tube 1.8 cm long, hairy within, throat narrow, ending in five twisted petals, tips rounded, corona of 5 scales near the throat of the corolla, cleft into 4-7 linear segments. Stamen included, filament short, Anthers connivent and adherent to stigma, connectives hairy, produced upward into long thread-like hairy appendages. Ovary with two distinct carpels, style filiform, thickened upward; stigma two lobed.

Flowering and Fruiting: May-July
Specimens Examined: A. S. College, Srinagar; Bhellum, 996

Distribution: India (Jammu and Kashmir); Mediterranean region; Persia; Japan; China and Pakistan.

41. ASCLEPIADACEAE

VINCETOXICUM Wolf

Erect, pubescent herbs; stem 15-50 cm tall, sparsely hairy; leaves opposite, stalked, ovate, lanceolate, 6-10 cm long, apex acute, acuminate, margin ciliate; inflorescence axillary stalked, peduncled cymes; flower yellow; calyx 5-segmented; corolla lobes 5, twisted, hairy within, corona 5-lobed, lobes rounded, broad, fleshy; stamens 5, united, pollinia projecting stigma in length, stigma 5-angled; fruit follicles; seeds comose.
**Flowering and Fruiting:** August-September

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 436

**Distribution:** India (Jammu and Kashmir) and West Himalayas.

### ASPERUGO

Annual herbs, decumbent-ascending, upto 50cm tall; stem much branched, branches spreading, striate, scabrid; leaves shortly stalked, oblong-lanceolate, acute or obtuse, appressed with hairs on both surfaces, hairs with bulbous base; flowers axillary, bisexual; calyx 5-lobed, lobes linear, lanceolate, accrescent; corolla blue, slightly exceeding; nutlets 4, compressed, ellipit-ovoid, reddish brown.

**Flowering and Fruiting:** July-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 117

**Distribution:** India (Jammu and Kashmir); Northern parts of N. America; Native to East and Central Europe.

### CYNOGLOSSUM L.

Erect, annual or biennial hispid herbs, 40-50 cm tall; stem branched, hispidly hairy; basal leaves petioled, upper sessile, lanceolae, appressed hispid on both surfaces; inflorescence axillary or terminal cymes; flower pale-blue or white, 3-4 mm across; calyx 5-lobed, accrescent, densely hairy without, glabrous within; corolla pale-blue or white, lobes ovate, obtuse, throat scales broader than long; ovary 4-lobed; fruit has 4-nutlets.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 702

*Distribution:* India (Jammu and Kashmir); Arabia; Pakistan; Sri Lanka; Burma; China and Malaysia.

**LITHOSPERMUM L.**

Annual herb, base woody; stem 30-45 cm tall, somewhat angular; leaves lanceolate, linear, margin entire, hairy on both surfaces; inflorescence cymes; calyx 5-lobed, lobes near to base; corolla 5-lobed, white, without scales in the throat; stamens 5, inserted on petals below the middle; style gynobasic; nutlets warted.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 915

*Distribution:* India (Jammu and Kashmir)

**MYOSOTIS L.**

*Key to Species*

<table>
<thead>
<tr>

</table>

Annual hairy herbs; stem weak, ascending, 15-45 cm tall, clothed with nearly appressed hairs; leaves sessile, oblong, about 4 cm long; calyx 5-lobed, lobes deep upto middle, appressed hairy; corolla bright blue, about 6.2 mm across with centre spotted yellow,
lobes spreading; stamens included; ovary 4-lobed, ovules one in each cell, ultimately separating from receptacle.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellen*, 827

*Distribution*: India (Jammu and Kashmir); W. Asia; Europe and N. America

Annual hairy herbs; stem tufted, erect or decumbent, 15-45 cm tall, clothed with spreading hairs; leaves oblong, about 4 cm long, basal stalked, upper sessile; calyx 5-lobed, almost to the base, hairy, spreading, hooked; corolla bright blue, spotted yellow at centre.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellen*, 294

*Distribution*: India (Jammu and Kashmir); W. Asia; Russia; Pakistan; Turkey; Northern Africa; Bhutan and Europe (Britain).

**CALYSTEGIA** Br.

Prostrate, hairy, annual herbs, stem weak, 15-40 cm long; leaves opposite, petioled, ovate, cordate or orbicular, margin crenate-serrate; flower pedicellate, pedicel equaling the
leaves, solitary axillary, light blue; calyx 4-lobed, lobes cordate, ciliate, exceeding the corolla, acuminate; corolla tube very short, 4-lobed, light blue; stamens 2, exserted, style linear; capsule biglobose; seed subglobose, rogose, 1-2 per cell.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 400*

*Distribution:* India (Jammu and Kashmir); Asia; Japan; China; Afghanistan; Russia; Mongolia; Nepal; Pakistan; Malaysia.

*Calystegia hederacea* Wall. var. *longipediellata* Bhellum et Magotra differs from the typical variety in having remarkable longer length of Pedicel and larger fruit size. In the literature published so far the length of pedicel is upto 5 cm long in *Calystegia hederacea* Wall var. *hederacea* Wall. In addition to it the flower colour differs in both these varieties. The flowers of the typical variety are pinkish purple and in new variety is comparatively white.

Endemic to Kashmir.

*CONVOLVULUS L.*

Prostrate, creeping or twining herbs with milky latex; stem weak, twining, angular, glabrous; leaves alternate, ovate-lanceolate, oblong, 2.5-10 cm long, base sagittate, hastate, apex obtuse, mucronate; flowers usually 2-3 flowered cymes; flower white tinged pink, 1.5-2.5 cm across; sepals 5, united, oblong, obtuse, green; corolla tube short, limb spreading; stamens 5, unequal, epipetalous; ovary 2-celled, ovules 2 in each cell, style short stigma 2-lobed linear; capsule ovoid-globose, 4-seeded.

*Flowering and Fruiting:* April-July

*Specimens Examined:* A. S. College, Srinagar; *Bhellum, 161*

*Distribution:* India (Jammu and Kashmir); Africa; Temperate Asia; Nepal; Pakistan; Tropical Asia and Europe.
**IPOMOEA L.**

Annual, hairy twiner; stem slender, villous; leaves ovate, cordate, 7-9 cm long, usually palmately 3-lobed, lateral lobes acute, central one acuminate, sparsely hairy on both surfaces; inflorescence 1-few flowered cymes; flower blue or pink, nearly 5 cm long; sepals 5, linear, densely villous at base; corolla funnel shaped; ovary 3-celled, stigma capitates; capsule subglobose, nearly 8 mm in diameter.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 487

*Distribution:* India (Jammu and Kashmir, common throughout); All tropical and subtropical regions.

Annual twining herbs; stem slender; leaves ovate, cordate, margin entire, apex acuminate; inflorescence in axillary cymes; flowers rosy-pink; calyx hairy towards base, glabrous above; corolla infundibuliform; capsule ovoid, depressed, or globose; seeds black, glabrous.

*Flowering and Fruiting:* August-November

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 939

*Distribution:* India (Jammu and Kashmir); Native of America, now pantropical,
44. CUSCUTACEAE

CUSCUTA L.

Parasitic, twiner, leafless; stem weak; flowers white tinged pink; corolla ovoid, contracted, 5-lobed, lobes triangular, covered with minute papillae; capsule exceedingly thin, fragile; seeds 4, ellipsoid.

Flowering and Fruiting: Agust-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 730

45. SOLANACEAE

DATURA L.

Erect, foetid, herb; stem branched, 0.5-1 m in height; radical leaves petioled, ovate-oblong, 15-20 cm long, sinuously toothed, cauline alternate, sessile, irregularly lobed, upper ones bract-like; flower sessile, 2.5-3 cm across, pale, greenish yellow, with purple centre; calyx urn-shaped, softly hairy, viscid; corolla funnel-shaped, 5-lobed, lobes spreading; stamens 5, inserted on corolla tube; overy 2-celled; fruit 1-1.2 cm across, enclosed by persistent, accrescent calyx.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 138

Distribution: India (Jammu and Kashmir); China; Central Asia; America. Native to Mexico
**SOLANUM L.**

An erect, annual or biennial diffuse, much branched, almost glabrous herbs; stem weak, much branched, glabrous or minutely hairy. leaves ovate or oblong, sinuate, toothed or lobed, dark-green; flowers white, small subumbellate, in extra-axillary cymes. calyx 5-lobed, lobes up to the middle; corolla rotate, 5-lobed, recurved, slightly hairy on margins; fruit a berry black or reddish-yellow; seeds many, discoid, yellow and minutely pitted.

Flowering and Fruiting: May-September

Specimens Examined: A. S. College, Srinagar; Bhellum, **488**

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); introduced in Northern America; Australia and S. Africa.

Parts used: Leaves, fruits

Ethnobotanical utility: Leaf paste is applied on ulcers and wounds as antiphlogistic. Leaf decoction is anti-spasmodic and also relieves cough. Leaf extract is prescribed in piles, dysentery and liver enlargement. Fruits are edible and used as tonic for overcoming anaemia.

*S. xanthocarpum* Schrad. & Wendl. Sert. Hannov. 1. 8. t. 2. 1795; Clarke in Hooker f., FBI. **4**: 236. 1883.

Prostrate or decumbent-ascending annual or perennial herbs; stem much branched, solid, armed, with straight pale yellow prickles; leaves pinnatifid or pinnatipartite, oblong, lobed, obtuse, 8-12 cm long, marginal lobes and ribs provided with 1 cm long prickles; inflorescence extra-axillary cyme; flower pedicellate, 2.5-3.1 cm across, purple; sepals 5, green, stellately hairy; corolla purple or blue, rotate pubescent inside, 5-lobed; stamens 5, epipetalous, anthers yellow, bithecous; ovary 2-carpellary, style 1.2-1.5 cm long, stigma capitates, slightly 2-lobed; berry yellow, nearly 2 cm in dia., seeds white, many.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, **430**

Distribution: India (Jammu and Kashmir); Pakistan; Iran; South and South-East Asia; Polynesia and North Africa.

**KICKXIA** Dumort.

Annual or perennial hairy, 25-40 cm tall herbs; stem prostrate, decumbent branched; leaves stalked, ovate or somewhat obovate-lanceolate, densely hirsute; flowers subsessile in axillary clusters; calyx 5-toothed, densely hirsute, margin scarious; corolla bilipped, hairy upto 7 mm long, upper lip purplish, spur deflexed or straight; stamens 5, filaments dialted at base; fruit capsule included in persistent calyx.

*Flowering and Fruiting:* May-August

*Specimens Examined:* A. S. College, Srinagar; *Bhellum,* 948

*Distribution:* India (Jammu and Kashmir); Afghanistan; Nepal and Pakistan.

**LEPTORHABDOS** Schrenk ex Fisch. & Mey.

Erect, nearly glabrous herbs; stem 30-90 cm tall, branched; leaves sessile, basal opposite, cauline alternate, 2.5-7.5 cm long, pinnatisect, segments linear, toothed or entire; inflorescence raceme; flowers light-pink; calyx bell-shaped, 5- toothed; corolla tube short, limb 5- lobed; stamens 4, didyanamous, anthers free; style long, stigma minute; capsule oblong flattened, enclosed in persistent calyx; seeds 2-4 per capsule.

*Flowering and Fruiting:* May-July
Specimens Examined: A. S. College, Srinagar; Bhellum, 969

Distribution: India (Jammu and Kashmir); Western Himalayas.

**MAZUS** Lour.

Flowering and Fruiting: April-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 976

Distribution: India (Jammu and Kashmir); Western Himalayas.

Annual, non-stoloniferous herbs; stem often branched from base, glabrous or sparsely hairy; radical leaves obovate, oblong, spatulate, 3-8 cm long, base cuneate, apex rounded, margin crenate, glabrous or patently long hairy, cauline leaves sessile, obovate, margin crenate; inflorescence lax racemes; flower pedicellate, longer than calyx; calyx 5-lobed, lobes accrescent; corolla bilipped, upper lip bilobed, lower lip trilobed, spreading, white or pale-blue, hairs glandular without; capsule 3 mm long.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 520

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas.

**VERBASCUM** L.

Annual, erect herbs; stem 0.5 – 1.5 m tall, simple or branched, densely stellate tomentose; basal leaves petiolate, alternate, simple, ovate, 15-50 cm long, margin entire or nearly so, cauline leaves sessile, ovate, base decurrent densely tomentose on both surfaces; inflorescence spicate spikes, rarely subsissee; flowers yellow; calyx 5-lobed, lobes ovate,
lanceolate, acute; corolla 5-lobed, upper petal yellow, pubescent without; stamens 5, lower 3 with short filaments, bearded, other have long filaments, glabrous; stigma capitate; capsule ovoid, as long as calyx, 7 mm long; tomentum stellate.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 786

*Distribution:* India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand Western Himalayas); Asia; Europe; N. Africa; China; Siberia; Australia and New Zealand.

Annual procumbent herbs; stem branched from the base; lower leaves opposite, becoming alternate upwards, ovate, margin crenate, glabrous or thinly pubescent; flowers axillary; sepals green, longer than petals; corolla white tinged blue; stamens 2, inserted at the base of the tube; capsule compressed, deeply notched.
**Flowering and Fruiting:** April-May  
**Specimens Examined:** A. S. College, Srinagar; Bhellum, 107  
**Distribution:** India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas; Pakistan.

Erect, somewhat succulent herbs; base stoloniferous, glabrous, puberulous, glandular towards apex; leaves sessile, oblong, lanceolate, 3-10 cm long, base amplexicaule, apex acute, margin entire or serrate; inflorescence lax up to15 cm long racemes; flower zygomorphic, bisexual, pink or purplish; calyx 4-lobed, up to 5 mm long, corolla tube longer than calyx, lobes 4, spreading; stamens 2, exserted another cells parallel; stigma subcapitate; capsule oval, strongly flattened, emarginated.

**Flowering and Fruiting:** March-May  
**Specimens Examined:** A. S. College, Srinagar; Bhellum, 157  
**Distribution:** India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas and Pakistan.

Annual, pubescent, spreading herbs; stem much branched from the base; leaves, opposite, sessile, rounded at base, remotely dentate; flowers axillary, nearly sessile; sepals linear, lanceolate, glandular hairy; corolla shorter than sepals; blue, streaked dark blue; stamens 2, inserted at the base of the tube; ovary rounded, style short; fruit rounded, notched.

**Flowering and Fruiting:** May-July  
**Specimens Examined:** A. S. College, Srinagar; Bhellum, 461  
**Distribution:** India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas and Pakistan.

Perennial herbs, rooting at nodes; stem decumbent, hollow, glabrous; leaves rounded, elliptic, obovate; flowers in axillary racemes; bracts minute; flowers pedicellate; sepals 4, green; petals 4-lobe, dark blue; stamens attached at the base of tube; ovary 2-locular, style slender, stigma capitate; capsule notched, rounded.

*Flowering and Fruiting: May-August*

*Specimens Examined: A. S. College, Srinagar; Bhellum, 535*

*Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas; distributed to north Hemisphere.*

Annual, erect herbs; stem slender, pubescent; leaves ovate or lanceolate, basal leaves opposite, 1.2-2.5 cm long, margin serrate, cauline leaves alternate, margin entire, glandular hairy; flowers solitary axillary, pedicellate, pedicel 1 cm long; calyx 4 parted, margin glandular hairy; corolla blue, tubular, tube short, lobes 4; stamens 2, epipealous, exserted, another cells bithecous, filaments short, 2 mm long; ovary with 2-carpels, style short, stigma capitates; capsule deeply bilobed, pubescent; seeds oblong, deeply pitted.

*Flowering and Fruiting: July-August*

*Specimens Examined: A. S. College, Srinagar; Bhellum, 120*

*Distribution: India (Jammu and Kashmir Himachal Pradesh and Uttarakhand), Western Himalayas; Pakistan and Westwards to S. E. Europe.*

*V. hederifolia* L.

Annual herbs; stem green, branched, branches on one side from the base; leaves usually alternate, spade-shaped, yellowish-green, 1-nerved, pubescent, margin toothed or lobulate, base rounded; flowers solitary axillary, stalked deflexed in fruits; sepals ovate, hairy; corolla blue, 4-lobed, lobes recurved; stamens 2; ovary bilocular, 2-ovules in each locule. fruit bilobed enclosed in persistent calyx.

*Flowering and Fruiting: April-May*

*Specimens Examined: A. S. College, Srinagar; Bhellum, 110*

*Distribution: India (Jammu and Kashmir), Western Himalayas.*
**V. officinale** L.

Perennial herbs; stem much branched from the base, rooting from the lower nodes, sparsely pubescent; leaves opposite, stalked, ovate, margin serrate, pubescent on both surfaces; flowers in racemes; calyx 4-lobed, sepals lanceolate, pubescent; corolla 4-lobed, pale-blue, veins darker; stamens 2, inserted on base of the corolla tube, anther ovoid; ovary rounded, glabrous, notched, pubescent; seed yellow, minute.

**Flowering and Fruiting:** May-June

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 848

**Distribution:** India (Jammu and Kashmir) and Europe.

---

Annual, hairy, prostrate or decumbent herbs; stem 5-25 cm long; leaves petiolate, ovate-oblong, base rounded, apex obtuse, margin crenate; flowers solitary axillary, pedicel much longer than subtending leaves; calyx 4-parted, lobes ovate or lancelate, spreading; corolla tube cylindric, 4-lobed, bright blue; stamens 2, exserted; capsule much broader than long, reticulations distinct, 5-12 seeded; seeds boat-shaped, deeply pitted.

**Flowering and Fruiting:** April-May

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 131

**Distribution:** India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas; Pakistan and S. Europe.

---

Annual herbs; stem branched, right from base; leaves opposite, spathulate, oblong, coriaceous, margin entire; inflorescence raceme; flower white or blue with yellow base, pedicellate, pedicel 3 mm long; calyx 4-parted, glandular hairy; corolla tube slender, short, 4-lobed white or blue with yellow base; stamens 2, exserted, anthers bithecous, filaments short, glabrous; ovary bicipellary, style white, stigma capitate, blue; capsule bilobed, hairy.

**Flowering and Fruiting:** June-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 185
**Distribution**: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand), Western Himalayas, Pakistan; Native to Europe.

Prostrate, hairy, annual herbs, stem weak, 15-40 cm long; leaves opposite, ovate, cordate or orbicular, margin crenate-serrate; flower pedicellate, pedicel equaling the leaves, solitary axillary, light blue; calyx 4-lobed, lobes ciliate, exceeding the corolla, acuminate; corolla tube very short, 4-lobed, light blue; stamens 2, exserted, style linear; capsule biglobose; seed subglobose, robose, 1-2 per cell.

**Flowering and Fruiting**: April-May

**Specimens Examined**: A. S. College, Srinagar; Bhellum, 207

**Distribution**: India (Jammu and Kashmir, Himachal Pradesh), Western Himalayas and Pakistan.

An aromatic perennial herb growing up to 10–60 cm. Stem prostrate and erect, squarish rooting at nodes. Leaves are in opposite pairs, simple, opposite, hairy, decussate, exstipulate, ovate, serrate, reticulate, aromatic with a coarsely serrated margin. Flowers small, present in axillary, cymose clusters, arranged in racemose manner. Corolla lavender-purple to whitish, bilabiate, glabrous. Stamens 4, exserted. Filaments, glabrous, pinkish-white.

*Flowering and Fruiting:* May-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 926

*Distribution:* India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Europe and America.

*Flowering & Fruiting:* May-September

Parts used: Leaves

Ethnobotanical utility: Leaf decoction checks flatulence, abdominal spasms and acts as an appetizer.

An aromatic fast-growing herb, 5-7.5 cm tall that creeps along an underground rootstock. Stem robust or slender. The leaves are formed in pairs opposite each other along the square-shaped stem. The leaves are usually coarsely hairy and the edges sparsely toothed. The colour of the leaves varies from light and dark green to grey. The small flowers are pale-lilac crowded into spikes at the tip of the stems; corolla white to mauve, in clusters forming a tapering cylindrical raceme. Sepals sharply 5-tooth, bell shaped, petals 4-lobed, lobes erect, stamen 4, exerted. Fruit nutlet.

*Flowering and Fruiting*: May-September

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 868

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Temperate and Tropical Asia; Europe and Northern America.

Parts used: Leaves

Ethnobotanical utility: Leaf decoction checks flatulence, abdominal spasms and acts as an appetizer.

Perennial erect herbs; stem quadangular, 30-45 cm tall; leaves shortly stalked, opposite, spreading, punctate beneath; inflorescence with foliar bracts; calyx 5-lobed, lobes equal, shining; corolla mauve, 4-lobed; ovary 4-lobed, style gynobasic; nutlets minute.

*Flowering and Fruiting*: May-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 476

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Russia; Africa; Northen America; Australasia; Europe and Tropical and Subtropical Asia.

Perennial herbs; rootstock thick; stem quadangular, clothed with white hairs; leaves sessile, opposite, oblong, lanceolate, tomentose; flowers in spikes, bracts awl-shaped; calyx 5-lobed, lobes equal; corolla 4-lobed, hairy without; stamens t, exerted; ovary deeply 4-lobed, style gynobasic; nutlets 4.
**Flowering and Fruiting:** May-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 528

**Distribution:** India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Russian Federation; Australasia; Europe; Temperate Asia and Northern America.

---

**MICROMERIA Benth.**

Low suffruteicose herb, tufted or lax; stems ascending-erect, unbranched, slender, glabrous, pubescent or hirsute with spreading or retrorse hairs. Leaves narrowly to broadly ovate, thickish-textured, entire, apically acute. Verticillasters few-flowered, rather lax. Bracts small, linear. Calyx narrow tubular, prominently ribbed, with spreading eglandular hairs and with or without sessile oil globules; teeth slightly unequal, narrow triangular-linear, subulate, ciliate, tube bearded at throat. Corolla rose to mauve, upper lip emarginated, lower lip longer than upper. Stamens included; thecae glabrous, spreading. Nutlets brown, oblong, apically rounded.

**Flowering and Fruiting:** Almost throughout the year

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 339

**Distribution:** India (Jammu and Kashmir), Himalayas, W. Asia and Africa

**Parts used:** Leaves

**Ethnobotanical utility:** Leaf decoction checks flatulence, abdominal spasms and acts as an appetizer. Leaves are also used in the preparation of tea.

---

**PRUNELLA L.**

Annual or perennial about 30 cm tall herbs; rooting at basal nodes; stem branched, 4-angular; leaves opposite, shortly stalked, ovate, lanceolate, thinly hairy on both surfaces; flowers in terminal spkies; bracts foliar; calyx 5-lobed, 2-lipped; vorolla 2-lipped, upper hood-like, almost entire; lower unequally 3-lobed; limb spreading; stamens 4 in pairs; ovary deeply 4-lobed; nutlets 4, angular.

**Flowering and Fruiting:** April-August
Specimens Examined: A. S. College, Srinagar; Bhellum, 425

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Nepal; Pakistan; Iran; Iraq; Turkey; Japan; Afghanistan; Morocco; Tunisia; Russian Federation; Portugal; Spain; Algeria; Europe and Northern America.

**SALVIA L.**

Annual erect herbs; stem 4-angular; radical leaves oblong, serrate, tomentose underneath; upper leaves 5-10 cm long, opposite, oblong, lanceolate, obtuse, margin serrate; bracts orbicular, hairy; calyx bell-shaped, hairy, teeth spine tipped; corolla 2-lipped, blue; stamens 2, filaments short; nutlets 4, smooth.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 322

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Afghanistan; Arabia; Egypt; Libya and E. Africa.

Annual, sparsely pilose to nearly glabrous acualescent, herbs; leaves lanceolate, 5-15 cm long, 3-5 nerved from base; inflorescence 1-4.5 cm long dense spikes; bracts ovate, oblong; sepals ovate; petals ovate, glabrous, acute; stamens 4, subequal; ovary bilocular, single to many ovuled; capule membranous, circumscissile; seeds black.

Flowering and Fruiting: June-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 329

Distribution: India (Jammu and Kashmir); Pakistan; Egypt and Greece.

Occurrence: Abundant in meadows.

Perennial glabrous herbs; leaves lanceolate, 5-10 cm long, shortly petiolate; inflorescence lax spike.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 302

Distribution: India (Jammu and Kashmir); Nepal; Pakistan; China; Korea; Russian Federation and Tropical and Temperate regions.

Perennial herb, acaulescent, small to 30 (-60) cm tall. Leaves membranous, narrow lanceolate to narrow elliptic, glabrous slightly pilose or attenuated, acute, at the base narrowed into a narrow petiole, nerves 5. Scapes erect, sparsely covered with white hairs. Spikes dense, conic-cylindrical, subglobose to globose. Sepals glabrous or at the margin villose, anterior sepals connate, obovate, bilobed. Corolla lobes narrow ovate to ovate. Seeds 2, smooth.

Flowering and Fruiting: April-October
Specimens Examined: A. S. College, Srinagar; Bhellum, 529

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Europe and Northern America.

Parts used: Leaves, seeds

Ethnobotanical utility: Leaf decoction taken orally cures cough, asthma and bronchitis. Seeds are taken with milk as aperient. Leaves are cooked as vegetable and eaten to increase eyesight. Leaf paste is styptic and is applied topically on abscess to help them ripen.

Perennial acaulescent herbs, variable, erect, rootstocks and numerous adventitious roots; leaves in rosettes, spirally arranged, petiolate, and lamina ovate elliptic, rounded at apex, entire; scapes many, arched, erect, glabrous to slightly pilose; inflorescence spike; Bracts equalling or shorter than the calyx glabrous, sepals broadly elliptic, oblong to rounded obtuse or subacute, margins broadly scarious; corolla greenish or yellowish white, glabrous, lobes elliptic- ovate to narrowly triangular; capsule globose or subconic; Seeds minute, dull black.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 16

Distribution: India (Jammu and Kashmir); Nepal; Pakistan; N. C. Asia; Europe and widely naturalized in many parts of the world.

Parts used: Leaves, seeds, whole plant

Ethnobotanical utility: Leaf paste is styptic and is applied on cuts and wounds to counteract inflammation. Seed decoction cures gastric and peptic ulcers, irritable bowel syndrome, diarrhoea and dysentery. Plant extract is prescribed in bronchitis, asthma and hay fever.

51. NYCTAGINACEAE

**MIRABILIS**

Flowering and Fruiting: May-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 305

Distribution: India (Jammu and Kashmir),

</table>
ACHYRANTHES L.

Annual or perennial herbs; stem ascending, subglabrous, appressed hairy; leaves opposite, shortlt stalked, ovate, lanceolate, 9-20 cm long, acuminate, sparsely hairy on both surfaces; inflorescence 10-20 cm long, slender spikes; bracts ovate, acuminate; bracteoles 3-5 mm; tepals 5, subequal; stamens 5, alternate with staminodes; utricle cylindrical, 2-3 mm long, smooth.

Flowering and Fruiting: August-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 372

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Japan; Bhutan; Indonesia; China; Myanmar; Malaysia; Nepal; N. Guinea; Russia; Thialand and Veitnam.

AERVA Forssk.

Perennial rambling herbs; stem terete, branched from base; clothed with dense appressed with white or yellow hairs; leaves alternate, opposite, elliptic or ovate lanceolate, 2.6-10 cm long, apex acute; spikes solitary or fascicled; flowers silvery white; bracts deltoid, ovate, persistent; bracteoles similar but smaller; perianth 5-parted, tepals ovate, wooly without; stamens 4 or 5 unequal, alternate with staminodes; ovary 1-ovuled.

Flowering and Fruiting: July-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 394

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); China; Pakistan; Philippines; Malay Islands; Java; Bhutan; Cambodia; Laos and Nepal.

ALTERNANTHERA Forssk.

Annual or perennial prostrate, spreading, polymorphic herbs, rooting at the nodes; branches many, often light purplish-grey; leaves simple, opposite, shortly-stalked, linear-oblong, lanceolate, oblong or elliptic; flowers white shiny, borne in small axillary, sessile, chaffy heads.

_Flowering and Fruiting:_ May-August

_Specimens Examined:_ A. S. College, Srinagar; Bhellum, 227

_Distribution:_ India (Jammu and Kashmir); Pakistan and almost all warm countries.

*AMARANTHUS BLITUM* L. Sp. Pl. 990. 1753.

Annual glabrous herbs; stem ascending or prostrate, sometimes erect, branched, leaves petiolate, petiole as long as twice the ovate blade, base cuneate, apex emerginate; inflorescence in slender terminal spikes or panicles forming axillary clusters; barcts spathulate; staminate flowers with 3 tepals; stamens 3; pistillate flowers with 3 tepals; utricles compressed, brown, lenticular, smooth, shining.

_Flowering and Fruiting:_ May-July

_Specimens Examined:_ A. S. College, Srinagar; Bhellum, 349

_Distribution:_ India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Central America; Eurasia; Nepal; Japan; South America; Northern America; Eurasia and Africa.

Erect, annual herbs; stem angular, angles obtuse, often much branched on upper parts, tinged purple; leaves simple, opposite, ovate, elliptic or rhomboid-oblong, 10-25 cm long, apex acute or obtuse; inflorescence in axillary, rarely terminal panicles, nodding
only in upper half; bracts ovate, acuminate, longer than tepals; male flowers with 5 tepals, stamens 5, often 3, as long as tepals; female flowers with 5 tepals; ovary 1-celled, ovule erect; utricle ovoid.

_Flowering and Fruiting:_ June-August

_Specimens Examined:_ A. S. College, Srinagar; _Bhellum, 321_

_Distribution:_ India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Central, South and Northern America.

An erect, diffuse, branched, herb; leaves alternate, simple, entire, obtuse, rhomboid or deltoid-ovate; flowers in axillary dense clusters, forming long distantly interrupted spikes, trimerous; bracts and sepals acute or awned; fruit minute.

_Flowering and Fruiting:_ June-August

_Specimens Examined:_ A. S. College, Srinagar; _Bhellum, 430_

_Distribution:_ India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Mexico; China; West Indies; Central, Southern and Northern America and warm Temperate and Tropical regions.

Annual erect herbs; stem angular, grooved, branched; leaves ovate, upto 10 cm long or more, apex acute or obtuse; inflorescence in paniculate, spiciform racemes; bracts ovat, triangular, sharply acute; male flowers with 3 tepals, lanceolate; female flowers with 3 tepals, narrowly oblong; ovary 1-celled; utricles ovoid; seeds dark brown to black.

_Flowering and Fruiting:_ June-September

_Specimens Examined:_ A. S. College, Srinagar; _Bhellum, 275_

_Distribution:_ India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Tropical and Subtripical and many warm Temperate regions.

| 3  | + Tepals 5, herbaceous, non-succulent  |  |  | C. album  |  |
|    | - Tepals 1-3, succulent  |  |  | C. foliosum  |  |

Annual, 10-150 cm, usually erect herbs; stem variously branched, farina grey, green, sometimes reddish or with red spots at leaf axils. basal and middle leaves petiolate, blade variously trullate, rhombic-ovate to lanceolate; inflorescence a variable spiciform or cymosely branched panicle, mostly terminal; perianth segments 5, dorsally keeled; pericarp thin, adherent; Seeds horizontal, black, 1-1.5 mm across.

Flowering and Fruiting: May-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 278

Distribution: India (Throughout India); Nepal; Burma; Europe; Asia, Africa; Australia; Native of Tropical America.

Strongly armatic herbs; stem branched, angular, grooved, pubescent; leaves lanceolate, oblong, 5-10 cm long, margin serrate; inflorescence in axillary paniced spikes; tepals 5, gland dotted, hairy without; stamens 3-5; stigma 3-5; seeds reddish brown, smooth.
Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 318

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Nepal; Saudi Arabia; Zimbabwe; America and throughout Tropical and Subtropical regions.

Annual, aromatic herbs; stem 20-50 cm tall, much branched, glandular pubescent; leaves oblong, 3-8 cm long, basal lobed, upper entire, glandular pubescent on both surfaces; inflorescence interrupted spikes; tepals 5, connate at base, gland-dotted pubescent; stamens 3-5; stigma bilobed; seeds reddish brown.

Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 716

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Mediterranean region; Africa; Europe; Northern America and Temperate and Subtropical Asia.

Annual or biennial herbs; stem brached, braches stout, angular, striated; leaves alternate, upto 7 cm long; basal leaves triangular, base hastate; upper ones rhomboid, lanceolate, margin dentate; inflorescence in bracteate spike; tepals 4-5; fruit, berry-like red utricle; seeds smooth, opaque.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 226

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Nepal and China.

| - | + | Capsule pubescent or hairy | 6 |
| 6 | + | Glands red or purple; capsule hairy at angles | E. prostrata |
| - | + | Glands green; capsules pubescent | E. indica |

Annual glabrous herbs; stem much branched, prostrate; leaves oblong, narrowly oblique, more or less falcate, 2-13 cm long, apex emerginate, glabrous; glandular appendages minute; margin denticulate; cyathia axillary, glandular, minute appendages; fruits trigonous glabrous, distally rugose; seed ovoid, shallowly rugose or smooth.

*Flowering and Fruiting:* May-September
Specimens Examined: A. S. College, Srinagar; Bhellum, 723

Distribution: India (Jammu and Kashmir, N. W. India); Afghanistan and Pakistan

Annual glabrous herbs; stem erect, much branched at the top; leaves alternate, obovate, margin minutely toothed; inflorescence cyathia in umbellate rays; involucre 4, toothed, smooth; gland yellow; capsule smooth; seeds veined.

Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 160

Distribution: India (Jammu and Kashmir), W. Himalayas; Pakistan; Afghanistan and Westwards.

Erect, suberect or decumbent ascending annual pubescent herbs; leaves elliptic oblong, base obliquely rounded, serrulate except at base; stipule intrapetiolar; cyathia in loose clusters, glands purple; fruit trigonous, smooth or sparingly pubescent; seeds almost smooth, shallowly rugose.

Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 717

Distribution: India (Jammu and Kashmir); Africa; Arabia; Iran; Afghanistan; Pakistan and China

Annual or biennial glabrous, glaucous herb; juice milky. Stem erect, hollow, 70-90 cm tall, branched above the middle; leaves lanceolate, opposite, decussate, sessile, margin entire, 2.5 - 10.5 cm long, base cordate, apex acute or subacute, bluish green; pseudoumbels 2-4 rayed; cythia pale-green, glands 2-horned; male flower each with one stamen, anther pale yellow; style three lobed, each lobe erect or recurved; fruit subglobose, hexalobate, 0.8 - 1.4 x 1.3 - 1.6 cm, smooth turning wrinkled with age.

Flowering and Fruiting: June - August
Specimens examined: Bhellum, 655

Distribution: India (Jammu and Kashmir); Atlantic Islands; Europe; N-W & N-E Africa; Caucus; China; Japan North America & South America and Russia.

Annual, erect or ascending herbs; stem much branched from the base; leaves alternate, sessile, obovate, base rounded, apex retuse; cyathia rays in pseudoumbels; glands semilunar, horns 2; fruits trilobate, smooth; seeds ovoid, caruncle white.

Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 878

Distribution: India (Jammu and Kashmir, Himachal Pradesh, Uttar Pradesh) and Pakistan.

Annual glabrous herbs; stem branched from the base; leaves ovate, obovate, apex obtuse or rounded; cyathia in pseudoumbels; rays repeatedly dichotomously branched. glands greenish, crescent shaped with 2-white horns; capsule 3 lobed, longitudinally grooved; seeds grey, small, caruncle white.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 123

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); S. & C. Asia; Europe, N. Africa; N & C. America and Australia.

Annual, prostrate, pubescent herbs; leaves obovate or suborbicular, rounded at apex; stipule triangular; cyathia solitary in axillary lateral shoots; glands transversely ovate, purplish with minute pinkish appendage; fruits smooth and pilose on sides.

Flowering and Fruiting: May-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 655

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan, native of Tropical and Subtropical America and introduced in many parts of old world.
RICINUS L.

Perennial monoecious, glabrous, herbs; leaves alternate, long petiolate, palmately lobed; petioles glandular at base and apex; inflorescence paniculate, leaf-opposed; male flowers pedicellate, anthers with numerous pollens; female flowers pedicellate, ovary 3-celled, one ovule in each cell; seeds dorsoventrally compressed;

*Flowering and Fruiting*: July-September

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 868

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Tropical Africa and spreading in tropical and subtropical regions of the world.

57. CELTACEAE

CELTIS L.

*Celtis australis* L., Sp. Pl. 1043, 1753; Hooker f., FBI. 5 : 482. 1888.

A large, deciduous tree; leaves alternate, shortly stalked, ovate or elliptic, base unequal, glabrous, serrate, acuminate.; flowers unisexual or polygamous, appearing before or with foliage; stamens 4-5, surrounding the silky disc; ovary ovoid seated on silky disc; fruit long-stalked, ellipsoid, usually solitary.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 340

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); North Africa; Asia Minor; United Kingdom; Native to South Europe.

58. ULMACEAE

ULMUS L.

Large, deciduous trees, bark rough, young shoots more or less pubescent; leaves elliptic, oblong orobovate, 5-15 x 3-6 cm, scabrid above at maturity, pubescent or glabrate beneath, base quite oblique, not 3-nerved at base, lateral nerves parallel, apex acute or
acuminate; flowers actinomorphic, bisexual, reddish brown; perianth lobes 5-6, reddish brown, papery, margins ciliate; filaments longer than perianth, anthers reddish-purple; ovary 2-celled, style arms 2, villous, long, slender; fruit winged, nut or samara, wings membranous.

Flowering and Fruiting: June-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 823

Distribution: India (Jammu and Kashmir); Afghanistan; Pakistan; Nepal and West Himalayas.

59. CANNABACEAE

CANNABIS L.

Annual or perennial erect dioecious, strongly aromatic herbs; stem 1-2.5 min height, grooved; leaves alternate, lower opposite, upper 1-3, lower 5-ll palmatipartite, segments generally lanceolate, oblong, apex acuminate, margin coarsely serrate, thinly gland hairy above, appressed-pubescent or gland punctate beneath; male flowers in short cymes, combined into terminal panicles, tepals 5; stamens 5, erect in bud; female flowers sessile in axillary pairs; perianth 5- lobed, hyaline, ovary sessile, style arms 2, filiform; fruit greyish brown or yellowish, smooth.

Flowering and Fruiting: June-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 839

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Pakistan; Nepal; Afghanistan; North-West Himalayas and Central Asia.

137

Annual, erect, dioecious herbs clothered with stinging hairs; stem angular, grooved; leaves opposite, ovate, lanceolate, cordate, acuminate, petiole 2-3 cm long, leaf margin coarsely toothed, teeth regular, nerves prominent underneath; stipule interpetiolar, free, linear, 2-3 cm long; inflorescence axillary panicle; flower actinomorphic, unisexual, small, green; male flowers with 4-parted perianth, segments minute, hairy without; stamens 4, free, filaments with sheathy base, anthers bithecous; female flowers with unequal persistent perianth lobes; achenes flat.

*Flowering and Fruiting*: July-September

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 384

*Distribution*: India (Jammu and Kashmir); West Himalayas; Pakistan and West China.

Dioecious, perennial, 50-150 cm herb with a dense indumentum of stinging hairs. Stem angled. Leaf lamina narrowly lanceolate to ovate, cordate at the base, margin serrate, apex acute-acuminate, stipules free lateral, oblong-lanceolate, ciliate. Racemes of cymes axillary. Flowers pale-greenish, or whitish, bracteate, bracts of male flowers smaller than those of female flowers. Sepals pubescent. Achenes ovoid-ellipsoid, pale green or greenish-brown

*Flowering and Fruiting*: June-September

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 351

*Distribution*: India (Jammu and Kashmir); Asia; Europe; North Africa; N.-W. America.

Parts used: Leaves, roots, whole plant

Ethnomedical utility: Leaf paste is styptic and is also applied on the scalp before hair wash to get rid of dandruff. Leaf extract is administered orally as tonic for female reproductive health and also regulates menstrual cycle. Leave decoction is taken orally for curing urinary tract infections.

Key to Genera

| 1 | + Flowers in catkin .................................................. Morus |
|   | - Flowers inside the hollow receptacle ............................. Ficus |

FICUS L.

Key to Species

| 1 | + Leaves scabrid above; receptacles sub-globose, purple on repening ---- Ficus palmata |
|   | - Leaves not scabrid above; receptacles globose, yellow on ripening -------- F. carica |

Shrubs, or small trees; stem much branched, twigs tomentose; leaves coriaceous, ovate, oblong, apex rounded or obtuse; tomentose, deep green; receptacle more or less pyriform, peduncle short; male receptacle spheroid.

Flowering and Fruiting: July-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 844

Distribution: India (Jammu and Kashmir); Western Asia; Iran; Iraq; Turkey; supposed to be indigenous to Syria and Palestine.

Deciduous tree or small shrub; tender parts tomentose or pubescent; leaves petiolate, petiole 2.5-5 cm long, lamina quite variable in size, broadly ovate, orbicular, margin crenate-dentate or deeply lobed, scabrous above tomentose underneath, base rounded or cordate, 3-nerved at base, lateral nerves 3-6 pairs; male flowers held towards upper part of the receptacle, female flowers below; stamens 3-6 per flower, fruit globose, 1.2-2.3 cm in diameter.

Flowering and Fruiting: July-September

Specimens Examined: A. S. College, Srinagar; Bhellum, 244

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Nepal; Pakistan; Africa; Afghanistan; Ethiopia; Iran; Iraq; Jordan and Sudan.
MORUS L.

Key to Species

| 1 | + | Leaves long pointed; fruits purple white or red | Morus australis |
| - | - | Leaves pointe; fruits purple or red | Morus alba |

A deciduous, 8-15 m or rarely up to 20 m tall tree with a dense, compact leafy crown. Leaves with a crisped hairy, filiform, lamina cordate, broad, ovate, highly variable on the same tree, upper surface glabrous, midrib and principal wins pubescent, margin regularly serrate or crenate-serrate. Male catkins 10-20 (-30) mm long including slender, hairy peduncle, with lax flowers. Male flowers: sepals free, broadly ovate, cucullate, obtuse, glabrous to hairy; staminal filaments equal to sepals, with ovate, exserted anthers. Female catkins ovoid, (2) 5-10 (-12) mm long. Female flowers: sepals suborbicular, ovary with glabrous free styles. Sorosis ovoid, white to pinkish-purple or black, sweet.

Flowering and Fruiting: March-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 211

Distribution: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Java; Malaya; Burma; introduced in Northen Africa and Eastern Asia.

A small or medium sized trees; young shoots smooth; leaves ovate, simple to 3-5 lobed, scabrous above, sparsely hairy beneath, margin crenate, apex sharply pointed; female flowers with longer style, stigmas 2, pubescent; fruits smaller than the earlier species, scarcely edible, red to dark purple.

Flowering and Fruiting: March-May

Specimens Examined: A. S. College, Srinagar; Bhellum, 513

Distribution: India (Jammu and Kashmir), Australia; China; Nepal; Bhutan; Myanmar; Russian Federation; Korea; Taiwan and South Asia.
62. PLATANACEAE

**PLATANUS** L.

A large deciduous tree, young shoots tomentose covered with stellate hair; bark peeling off in strips; leaves alternate, 5-7 palmately lobed, lobes coarsely toothed, 8-25 x 10-30 cm; stipules 2, connate below, usually 2 cm long; inflorescence globose capitulum, 1-2 cm across, peduncle pendent; flowers unisexual; male capitulum subsessile, globose, 4-5 mm in dia; perianth lobes free; stamens 3-8, anthers oblong; female capitulum sessile, globose; perianth lobes spathulate; carpels 3-8, free, ovary linear, style hooked at the tip; capitulum 2-3 cm in fruiting; achenes 7-9 mm long, obpyramidal, densely clothed with long, jointed hairs at the base, style persistent.

*Flowering and Fruiting*: May-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 235

*Distribution*: India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Turkey; N. Iran; C. W. Asia; Afghanistan; Pakistan and S. E. Europe.

63. JUGLANDACEAE

**JUGLANS** L.

Deciduous tree up to 25 m tall. Leaves imparipinnate; leaflets 5-9, softly tomentose, opposite to sub-opposite, ovate to elliptic-ovate, acute to acuminate, glabrescent to pubescent on nerves beneath. Male catkins, lateral; bract c. 2 mm long; bracteoles 2, ovate to obovate, pubescent; tepals 4, ovate; stamens 10-20, subsessile; anthers irregularly apiculate, basifixed, dehiscing longitudinally. Female flowers 1-3, terminal on short spikes; involucral tube of fused bract and bracteoles, tomentose, glandular, obscurely 4-toothed and irregular at the margin; tepals 4, linear, alternating with the teeth; margin sparsely pubescent; ovary ovoid,
inferior. Drupe ovoid to subglobose; epicarp green, glandular; endocarp 2-valved; seed 2 to 4-lobed.

*Flowering and Fruiting:* May-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 765

*Distribution:* India (Jammu and Kashmir, Himachal Pradesh and Uttarakhand); Nepal; China; Europe; Afghanistan; Burma; Pakistan and Tibet.

Parts used: Leaves, bark, fruit wall

Ethnobotanical utility: Leaf decoction is effective in tuberculosis and leucorrhoea. The leathery pericarp of unripe fruit (rind) is finely ground and then applied on alopecia affected site to promote hair growth. Bark and rind of the unripe fruit is used to clean teeth and strengthen gums. Intake of unripe kernel acts as aperient. Ripe kernel is eaten as memory enhancer.

*Populus balsamifera* L. Sp. Pl. 990. 1753.

Cultivated trees, stem flexuose, yellowish brown or grey branches; leaves coriaceus; catkins drooping; male flowers sessile; female flowers pedunculate.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 794

*Distribution:* India (Jammu and Kashmir); Native to N. America.

Trees, stem branched; leaves petiolate, ovate, white tomentose, apex obtuse; catkin hairy, 5-10 cm long; female catkin shorter; tepals ob lanceolate; capsule shortly stalked, 2-valved.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; *Bhellum,* 781

*Distribution:* India (Jammu and Kashmir); Australia; Europe; Bhutan; Nepal; Sri Lanka; Myanmar; Thailand and Papua New Guinea.

---

A larger tree; bark greenish – grey, smooth on young parts; buds sticky; leaves broadly ovate-cordate, base cordate, apex acuminate, margin crenate serrulate, teeth minutely ciliate; petiole 5-12 cm long; inflorescence catkin, male catkin 7-10 cm long, female lax when fruiting, 15-30 cm long; flowers unisexual, bracteate; bracts caducous; male flowers with bell-shaped perianth; stamens numerous, filaments free; bracts fringed with hairs; disc cup-shaped, female flowers bracteate, disc embracing half the ovary, margin undulate; ovules erect and sessile, stigmas 3-4, very large; capsule ovoid, 3-4 valved; seeds embroiled in long silky hairs.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; *Bhellum,* 833

*Distribution:* India (Jammu and Kashmir, Uttarakhand); N. W. Himalayas.

---

**P. nigra** L. Sp. Pl. 1034. 1753. var. *italica* (Moench.) Koehn

A large tree with fastigiate branches; crown narrow, cylindrical; buds sticky; leaves 5-10 cm long, ovate, glabrous, maging crenate, acuminate; petiole upto 7 cm long; male catkin upto 8 cm long; stamens 6-30; female catkin upto 10 cm long; stigmas 2, sessile; capsule shortly pedicelled.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; *Bhellum,* 936

*Distribution:* India (Jammu and Kashmir, Uttarakhand); Africa; Temperate Asia and Europe.

Trees of 20-25 m height. Stipules caduceus. Flowering coetaneous. Male catkin 3-5 cm; bracts yellowish, ovate-lanceolate or obovate-oblong, ciliate, abaxially glabrous, adaxially subglabrous or pilose at base, margin entire. Male flower: glands adaxial and abaxial; stamens 2, free; filaments pilose at base; anthers yellow. Female catkin 3-4.5 cm, bracts yellowish, lanceolate or ovate-lanceolate. Female flower: glands adaxial and abaxial; ovary ovoid-conical, glabrous; style short, 2-lobed; stigma 2-parted.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; *Bhellum, 143*

*Distribution*: India (Jammu and Kashmir); Eurasia; Temperate Asia; Russian Federation and Africa.

Parts used: Stem, leaves, bark

Ethnobotanical utility: Fresh and tender twigs are used as toothbrush to clean teeth, check tooth decay, halitosis and to keep gums healthy and strong. Leaf decoction is taken orally to relieve headache. Bark decoction is administered in arthralgia. Leaf extract is prescribed for curing fever.

---

A medium sized tree; stem branched, branchlets pedulous; leaves linear-lanceolate, 7-18 cm long, margin finely serrulate or serrate, apex acuminate, glabrous or sparsely hairy beneath; bracts silky; stamens 2, filaments free, villous towards base; disc glands 2; female catkin as long as male; style absent, stigma sessile; capsule sessile, glabrous.

*Flowering and Fruiting*: May-August
Specimens Examined: A. S. College, Srinagar; Bhellum, 589

Distribution: India (Jammu and Kashmir); Chian; Asia; Europe; North America and South America;

*S. elegans* Wall. ex Anders.

A small branched tree; stem with black or brown braches; leaves 4-6 cm long; male catkin 4-5 cm long; stamens 2; female catkin still longer, nearly 5.6-7.5 cm long; stigma spreading; capsule 3-4 mm long.

Flowering and Fruiting: May-July

Specimens Examined: A. S. College, Srinagar; Bhellum, 265

Distribution: India (Jammu and Kashmir, Uttarakhand); Afghanistan; Pakistan and Nepal.

65. IRIDACEAE

*IRIS* L.

Perennial tuberous herbs; leaves upto 60 cm long glaucous; bracts with narrow papery margin; inflorescence many flowered; flowers white or tinged bluish about 6 cm across, fragrant; capsule many seeded.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 229

Distribution: India (Jammu and Kashmir),

*GAGEA* Salisb.

A small, bulbous, glabrous 5-15 cm tall herbs, radical leaves 5-30 cm long, linear lanceolate, acute, overtopping the inflorescence; caluline leaves1-2, flowers yellow in 3-7 scorpoid cymes.

*Flowering and Fruiting:* April-May

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 361

*Distribution:* India (Jammu and Kashmir)

**ORNITGHALUM L.**

Perennial herbs with bulbous base; rootstock fibrous, many; stem 10-30 cm tall; leaves few, oblong, narrow, inflorescence corymbs; pedicels of older flowers longer than younger ones; bracts linear, lanceolate; perianth segments free, spreading, nearly twice as long as stamens; ovary 3-locular, style shorter than ovary; fruit a capsule.

*Flowering and Fruiting:* May-July

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 237

*Distribution:* India (Jammu and Kashmir); Europe to Caucasus; North Africa; United Kingdom and Asia.

67. ASPARAGACEAE

**ASPARAGUS L.**

Herbaceous; cladodes slender, subulate, 0.7-2.3 cm long; pedicle 3-6; flowers solitary or in pairs.

*Flowering and Fruiting:* June-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 223

*Distribution:* India (Jammu and Kashmir); Europe; Russia; Mongolia; China; N. W. Africa and N. W. Asia.
68. COMMELINACEAE

COMMELINA L.

Annual or perennial, glabrous or subglabrous decumbent herbs; stem creeping, and rooting at nodes; leaves lanceolate, or elliptic, 5-10 cm long; apex acuminate; inflorescence simple or branched cymes subtended by spathe; flowers blue, nearly 1 cm across; capsule trigonous, obovoid or ellipsoid.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 869

*Distribution:* India (Jammu and Kashmir, Uttarakhand); Sri Lanka; Bangladesh; Malaysia; Indonesia and Pakistan.

69. JUNCACEAE

JUNCUS L.

Key to Species

| 1 | + | Plants 5-20 cm tall; flowers pale green; seeds brown | -------------------- | Juncus bufonius |
| 1 | - | Plants 30-90 cm tall; seeds yellowish | ----------------------------------------------- | J. effusus |

Annual, tufted herbs, 5-20 cm in height; stem erect, often decumbent at base, simple or branched, terete, glabrous; basal leaves flat, linear, 10 x 0.2 cm, upper ones smaller, leaf sheath not auricled; flowers sessile, solitary or in small clusters, occasionally viviparous; bracts often foliar, upper scarious; flower bisexual; tepals 6, imbricate, persistent, sharply acute, margin scarious; stamens 6, often only 3 in terminal flowers; ovary 1 or 3 celled, style 3-branched; capsule oblong, minutely pointed, shorter than perianth.

*Flowering and Fruiting:* June-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 281

*Distribution:* India (Jammu and Kashmir, Uttarakhand), Himalayas, N. Temperate regions including Britain.

Glabrous herbs; stem soft, slender, 30-90 cm tall, densely matted; inflorescence nodding, decurrent, 7-13 cm long cymes; sepals lanceolate, exceeding capsule; stamens 3, rarely 6, shorter than sepals; capsule obtuse, mucronate; seeds minute, obtuse at ends.

*Flowering and Fruiting*: June-August

*Specimens Examined*: A. S. College, Srinagar; **Bhellum**, 863

*Distribution*: India (Jammu and Kashmir); Russia and N. America.

---

**70. LEMNACEAE**

**SPIRODELA** Schleid.

Floating herbs; fronds 5-8 mm across, obovate or suborbicular, flat, convex beneath, 5-7 mm across; green above, purple beneath; 7-11 nerved; roots 5-10; spathe open at tip; seeds smooth, reticulations faint.

*Flowering and Fruiting*: May-August

*Specimens Examined*: A. S. College, Srinagar; **Bhellum**, 182

*Distribution*: India (Jammu and Kashmir, Uttarakhand); Temperate or Tropical regions.

---

**71. BUTOMACEAE**

**BUTOMUS** L.

Perennial, erect, glabrous aquatic herbs; stem up to 1 m tall; basal leaves linear, long pointed, 3angled; flowers pink, 1.5-2.5 cm across in terminal umbels; bracts brown.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; **Bhellum**, 389

*Distribution*: India (Jammu and Kashmir); Britain; Africa; Armenia; Russian Federation; Mongolia; Europe; Austria; China; Pakistan; Afghanistan; Iran; Iraq; Israel; Jordan; Lebanon; Syria and Turkey.

Annual tufted herbs; roots fibrous; stem triqueterous; basal leaves shorter or longer than stem; bracts unequal; inflorescence spikelets compressed; glumes broadly ovate, mucronate; stamens 1-2; style arms 2; nut obovoid.

**Flowering and Fruiting:** July-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 269

**Distribution:** India (Jammu and Kashmir); Afghanistan; Eurasia; Pacific Island; North America; South America; Bangladesh; Japan; Australia; Russia; Thailand; Madagascar; Vietnam; Africa and N. W. Asia.

---

Annual or perennial herbs; stem triqueterous; 20-70 cm tall; basal leaves longer than stem; spikes about 15 cm long; spikelets 2-6 cm long; glumes obovate, mucronate; nuts trigonous, smooth.

**Flowering and Fruiting:** July-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 870

**Distribution:** India (Jammu and Kashmir); Pakistan; Taiwan; Austria; Myanmar; New Guinea; Sri Lanka; Philippines; Vietnam; Mayalaysia and S. W. Asia.

---

Perennial rhizomatous herbs; culms tufted, 3-angular, smooth; inflorescence 20-30 cm long spikelets, narrowly oblong, compressed; glumes yellowish-white or straw coloured; stamens 3; styles elongate; stigmas 3; nutlets broadly obovate, triqueterous.

**Flowering and Fruiting:** July-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 761

*Flowering and Fruiting*: June-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 224

*Distribution*: India (Jammu and Kashmir); Australasia; North America; Africa; Tropical and Temperate region; Europe and Pacific Asia.

---

Perennial, glabrous, tufted herbs 20-40 cm tall; stem triqueterous; basal leaves longer or shorter than the bracts; spikelets clustered, digitate; glumes boat-shaped, ovate, acute, nerved on either side of keel; styles 3, branches unequal; nut obovoid-ellipsoid.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 835

*Distribution*: India (Jammu and Kashmir); Asia; Africa; Madagascar; Pacific Islands and Australia.

---

Perennial herbs; rhizome stoloniferous, stolons many; stem herbaceous, triqueterous; leaves dark green above, light beneath; spikes few in spikelets; glumes reddish brown or light brown, apiculate; nuts obovoid-oblong.

*Flowering and Fruiting*: June-August

*Specimens Examined*: A. S. College, Srinagar; *Bhellum*, 530

*Distribution*: India (Jammu and Kashmir); Pakistan; Nepal; Bhutan France; United Kingdom; Bragil; Portugal; Temperate and Tropical Asia; Europe; Pacific countries; and North America.

---

Annual or perennial herbs; stem triqueterous; stem 20-35 cm tall; roots fibrous; leaves shorter or longer than stem; spikelets shorter or longer than stem, acute; spikelets 3-8 breenish brown; glumes ovate, acute; styles 3; nuts dark brown, laterally compressed.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 250

Distribution: India (Jammu and Kashmir); Pakistan; Nepal; Asia; Africa; China; Malaysia; Myanmar; Saudi Arabia and Armenia.

</tbody>
</table>

**ANDROPONON L.**

Annual or perennial 30-60 cm tall herbs; roots fibrous; leaves filiform, flexuous, tufted at base, distant, large, pale or reddish; spikes long, deflexed, spikelets long, deflexed, spikelets with strong nerves, more or less 2-cuspidate, marginal glume pubescent.
Flowering and Fruiting: June-August
Specimens Examined: A. S. College, Srinagar; Bhellum, 243
Distribution: India (Jammu and Kashmir); N. W. & C. Himalayas and Yunan.

AVENA L.

Annual 30-100 cm tall; culms erect; basal leaves linear, lanceolate, base sheathy; spikelets pendulous; glumes nerved, thin, hairy, tip 2-lobed, awn 3-times the length of glume; rachilla joints glabrous; grain free from lemma and glumes.
Flowering and Fruiting: May-June
Specimens Examined: A. S. College, Srinagar; Bhellum,287
Distribution: India (Jammu and Kashmir, Uttarakhand), N. W. Himalayas, N. Asia, N. Africa, Europe including Britain.

BORHRI CHOLOA Kuntze

Perennial herbs; stem erect, geniculate, rootstock woody; culms single, glabrous at nodes, upto 50 cm tall; inflorescence 2-8; spikelets 3-5 cm long, subdigitate or on very short axis; glumes not pitted.
Flowering and Fruiting: July-August
Specimens Examined: A. S. College, Srinagar; Bhellum, 819
Distribution: India (Jammu and Kashmir); North-West Himalayas; Afghanistan; Bhutan; Nepal; N. Africa; S. W. Asia; China; Taiwan; Europe; United States of America.

CYNODON Rich.

Glabrous rhizomatous perennial herbs, rooting at nodes; culms prostrate or decumbent ascending, nodes glabrous; leaves linear, spatulate, minutely scabrid on both the
surfaces and along the margins; spikes 2-6 digitate, green or purple; glumes linear acute, 1-nerved; lemma 3-nerved; style 2-branched.

*Flowering and Fruiting:* April-September

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 279

*Distribution:* India (Jammu and Kashmir); Warm Temperate region; Pakistan; China; Taiwan; Nepal and almost Cosmopolitan.

**Dactylis L.**

Perennial herbs; stem tufted upto 30 cm tall; leaves 2-3.5 cm long, rarely more, margin scarbrid, ligules membranous; panicles secund, spikelets laterally compressed; rachilla prolonged; glumes lanceolate; styles 2-branched, stigma plumose; grains oblong, triquetrous, grooved.

*Flowering and Fruiting:* May-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 195

*Distribution:* India (Jammu and Kashmir; Uttarakhand); S. W. Asia; Europe, Kazakhstan; Bhutan; China; Nepal; Russia; Mongolia; Taiwan and N. Africa.

**Dactyloctenium Willd.**

Annual, stem with culms slender, erect, creeping, rooting below the nodes; leaves lanceolate, acute, scabrid on both the surfaces; ligules hairy; outer glumes acute with ciliaeate wings; grains globose, rugose.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 392

*Distribution:* India (Jammu and Kashmir; Uttarakhand); Pakistan; Afghanistan; Sri Lanka and thoroughghout Tropical region.
**DICHANTHINIUM Willem**

Caespitose, perennials; culms decumbent-ascending, nodes tinged purple, glabrous; leaves linear, lanceolate, sparsely tubercled hairy; spikes forming digitate clusters; rachis bearded at nodes.

*Flowering and Fruiting:* June-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 382

*Distribution:* India (Jammu and Kashmir, Uttarakhand and almost throughout India); Pakistan; China; Australia; and Tropical Africa.

---

**ECHINOCHLOA P. Beauv.**

Annual, erect, tufted herbs; culms slender, to stout, 30-80 cm tall; leaves linear, 10-25 cm long; smooth or scarberulous underneath, apex acuminate; inflorescence erect, 5-15 cm long spikes; spikelets bisexual, elliptic, awned, awn green or purple; grain broadly elliptic.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 280

*Distribution:* India (Jammu and Kashmir, Uttarakhand); Pakistan; Burma; Malaya; Sri Lanka; S. E. Asia and Africa.

---

**ELEUSINE Gaertn.**

Annual glabrous herbs; stem culms erect, decumbent, upto 60 cm tall; leaves linear, lanceolate, glabrous; ligule obsolete; spikes subdigitate, spreading, ending in spikelets; glumes thin, boat-shaped; lemma also boat-shaped, mucronate; grain trigonous, reddish-brown.

*Flowering and Fruiting:* July-August

*Specimens Examined:* A. S. College, Srinagar; Bhellum, 767
**ERAGROSTRIS Wolf**

Annual herbs; culms tufted, erect, decumbent, spreading, 30-60 cm tall; leaves linear lanceolate; ligule minute, scarious; panicles loosely branched; glumes unequal, obovate; lemma ovate, obtuse; stamens 3; grain obovoid, brown.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 820

*Distribution*: India (Jammu and Kashmir, Uttarakhand); Pakistan; Baluchistan; South & South-East Asia and Tropical Africa.

**FESTUCA L.**

Perennial or rarely annual herbs; culms smooth; leaves flat, 3-7 nerved, acute or obtuse; ligules very short, truncate; spikelets oblong, lax, 4-9 flowered; ligules oblong, lanceolate, acuminate, margin broadly hyaline towards apex; grains linear, oblong, grooved.

*Flowering and Fruiting*: July-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 674

*Distribution*: India (Jammu and Kashmir); South West Asia; Europe and North America.

**HEMARTHRIA R. Br.**

Annual or perennial; culms usually robust, slender, 30-60 cm tall; leaves linear, acute, base rounded or cordate; spikes solitary, compressed; joints of rachis tough, breaking up; spikelets thick, swollen; glumes concave, elliptic-lanceolate; stamens 3; styles 2, stigma plumose.

*Flowering and Fruiting*: May-August

---

158
Specimens Examined: A. S. College, Srinagar; Bhellum, 452

Distribution: India (Jammu and Kashmir); Pakistan; Burma; Sri Lanka; Malaysia; East India and East Africa.

**IMPERATA Cirillo**

Perennial herbs, 20-50 cm tall; rhizome creeping; culms erect; leaves linear, glabrous, scabrid, ligule scarious; rachis tough, breaking up; outer glume lanceolate, acuminate; lemma awnless, ciliate; stamens 2, anthers yellow; ovary ovoid.

Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 391

Distribution: India (Jammu and Kashmir); Pakistan; Sri Lanka; Java; Japan; China and Australia.

**LOLIUM L.**

Annual herbs, 40-100 cm tall; culms erect, nodes glabrous; leaves linear, upto 40 cm long; spikelets 3-8 flowered, awned; outer glume absent, inner one linear, lanceolate, oblong; lemma elliptic, oblong, awn longer than glumes; stamens 3; styles 2, stigma plumose.

Flowering and Fruiting: May-June

Specimens Examined: A. S. College, Srinagar; Bhellum, 112

Distribution: India (Jammu and Kashmir, Uttarakhand); North-West Himalayas; Mediterranean region; Persia and Iraq.

**PANICUM L.**

Annual herbs; culms tufted, 60-120 cm tall; leaves 15-30 cm long, glabrous, ciliate or hirsute, base narrow, spinosely toothed, scabrid; panicles 15-20 cm long, fascided, densely crowded; spikelets green, erect, turgid, dorsally 5-streaked.

**Flowering and Fruiting:** July-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 661

**Distribution:** India (Jammu and Kashmir, Uttarakhand); Central and Eastern Asia; Pakistan; Nepal; Japan; Taiwan; N. China; Europe; W. Australia and S. America.

---

**PASPALUM L.**

Perennial herbs; rhizomatous forming loose mats; culms upto 1 m tall, ascending, rooting at nodes; leaves linear, upto 16 cm long; ligule short, truncate, or jagged; panicles 2-3 rarely more, upto 10 cm long, erect, appressed; glumes usually 4, lower minute or wanting; stamens 3; styles 2; grains free within hardened glume and palea.

**Flowering and Fruiting:** May-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 752

**Distribution:** India (Jammu and Kashmir, Uttarakhand) and Tropical and Subtropical region.

---

**PENNISETUM Rich ex Pers.**

Perennial 15-60 cm tall herbs; leaves ovate-lanceolate, flat, 5-15 cm long, glabrous, sparsely hairy, base contracted, mouth ciliate; spikelets ovate-lanceolate, often flexuose, subsessile, rachis glabrous.

**Flowering and Fruiting:** May-August

**Specimens Examined:** A. S. College, Srinagar; Bhellum, 216

**Distribution:** India (Jammu and Kashmir); Nepal; Pakistan; China; Russia; Bhutan and USA.
**PEROTIS**

*Perotis indica* (L.) Kuntze, Rev. Gen. Pl. 2: 787. 1891; Bor, Grasses Ind. 611. 1960.

Perennials; culms tufted, ascending; leaves ovate, acute, base amplexicaule, 2.2 cm long, sheath glabrous; spikes purple; glumes unequal; lemma half as long as the glumes; stamens 3; styles 2; stigma plumose.

*Flowering and Fruiting*: May-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 807

*Distribution*: India (Jammu and Kashmir, Uttarakhand); China; South-East Asia; Indian Subcontinent; Africa; New Guinea and Madagascar.

**PHALARIS** L.

Annual erect herbs; culms 30-60 cm tall; leaves lanceolate, 15-30 cm long, acuminate, glabrous, minutely glandular on both surfaces; inflorescence densel spiciform cylindric; spikelets flat, shining; glumes nearly equal, 3-nerved, acute, keel winged; paleae lanceolate,, 2-keeled, ciliate towards apex; stamens 3, anthers linear; styles 2, stigma plumose.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 322

*Distribution*: India (Jammu and Kashmir); N. W. Himalayas; Pakistan; Nepal; Afghanistan; Bangladesh; Bhutan; Iran; Iraq; Jordan; Saudi Arabia; Turkey; Syria; Mediterranean region and Tropical and Subtropical region.

161

Annual stoloniferous, herbs; leaves narrow, ligule truncate; spikelets crowded, ovate, lanceolate, nerves prominent, margin aperulous, glabrous;

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 204

*Distribution*: India (Jammu and Kashmir); Asia; Japan; Indonesia; Austria; Belgium; Seberia; Afghanistan; USA; France; Greece; Hungary; Iran; Iraq; Mongolia; Tajikkistan and Europe.

Annual or perennial herbs; stem slender, 12-30 cm tall, tufted, erect, often zigzag near the base; leaves 5-10 cm log; ligule oblong, pointed; panicles 2.2-7 cm long, stiff; spikelets numerous, shining; outer glume empty, 1-nerved; flowering glumes 5-nerved, hairy or nearly glabrous.

*Flowering and Fruiting*: May-July

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 113

*Distribution*: India (Jammu and Kashmir); Indonesia; Japan; Kazakhstan; Korea; Vietnam; Mongolia; Myanmar; Russia; New Guinea; South West Asia; N. Temperate regions including Britain and Africa.

Annual or perennial, erect herbs; stem upto 30 cm tall; leaves linear, flat, acute; ligule ovat or oblong; panicles oblong; spikelets 4-7 flowered, subsessile, crowded, often viviparous; styles 2, distinct, short, feathery; grains enclosed within persistent glumes.

*Flowering and Fruiting*: May-August

*Specimens Examined*: A. S. College, Srinagar; Bhellum, 201

*Distribution*: India (Jammu and Kashmir); North America; Eurasia and USA.

Perennial herbs; stem slender, erect, 30-60 cm tall; rootstock produces stolons; leaves linear, 5-30 cm long; ligules short, blunt; panicles stiff, upto 6.5 cm long; spikelets numerous, 3-5 flowered; outer glumes empty, 1-nerved; flowering glumes hairy.
Flowering and Fruiting: May-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 153

Distribution: India (Jammu and Kashmir, Uttarakhand), N. Temperate regions including Britain.

Annual or perennial tufted herbs; stem brachied from base, 45-70 cm tall; leaves linear-lanceolate, up to 16 cm long, acuminate, sparingly hairy; panicles lax, linear to narrow-lanceolate; ligule with a fringe of hairs; spikelets ovate to elliptic, 1.5 to 2 mm long; upper florets fertile; stamens 3; styles 2, free to base; grain free, enclosed within glume and palea.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 218

Distribution: India (Jammu and Kashmir, Uttarakhand); South East Asia; Sri Lanka; Pakistan, Burma, Sri Lanka, Malaysia and Polynesia.

Annual or perennial herbs; culms erect, glabrous at nodes, 30-90 cm tall; leaves lanceolate, margin scabrid, hairy on both surfaces, hairs tuberculate; panicles dense, 1.5-7 cm long; ligule a fringe of hairs; outer glume ovate, apiculate; inner obtuse, transversely rugose, linear, empty, apiculate; stamens 3; styles distinct.

Flowering and Fruiting: July-August

Specimens Examined: A. S. College, Srinagar; Bhellum, 381

Distribution: India (Jammu and Kashmir); Sri Lanka; Angola; Pakistan; Somalia; Aourth East Asia and Zimbabwe.

Annual, tufted herbs; culms erect, 30-80 cm tall; leaves flat, 20-30 cm long, green, glabrous or few scattered hairs, margin scabrid; panicles up to 20 cm long; rachis hairy; spikelets solitary, elliptic; outer glume ovate, subacute; inner one obtuse, 7-nerved, transversely rugose; lemma obtuse; stamens 3, styles distinct; grains smooth.

*Flowering and Fruiting:* June-August

*Specimens Examined:* A. S. College, Srinagar; *Bhellum*, 785

*Distribution:* India (Jammu and Kashmir, Uttar Pradesh); Sweden; Libya; Egypt; China; Turkey; Nepal; Russia and Europe.
DISCUSSION AND CONCLUSION

Areawise Campus Flora of Amar Singh College, is perhaps the smallest Flora published so far in Jammu and Kashmir State. The Flora represents micro unit of floristic diversity that unlock significant knowledge of plant wealth. The main stress is focused on the intensive floristic study. The total numbers of genera represented by single species are 33. The ten dominant families in terms of number of species in each family (Fig. 1) are Asteraceae (42 spp.), Poaceae (28 spp.), Brassicaceae (21 spp.), Fabaceae (16 spp.), Scrophulariaceae (15 spp.), Lamiaceae (12 spp.), Ranunculaceae (9 spp.), Cyperaceae, Euphorbiaceae, and Apiaceae (8 spp. each). The ten dominant genera and their number of species in each genus (Fig. 2) are Veronica (10 spp.), Euphorbia (7 spp.), Cyperus, Geranium, Plantago and Ranunculus (5 spp. each), and Amaranthus, Chenopodium, Mentha and Trifolium (4 spp. each). As many as 315 species representing 209 genera belonging to 75 families collected from the Campus Amar Singh College, Srinagar. Of these 265 species belonging to 171 genera are dicotyledons and 50 species of 38 genera are monocotyledons. The most dominant family of the study is Asteraceae representing 42 species belonging to 30 genera (Fig. 1). The ten dominant families account for 53.6% of the total number of species collected from College Campus. Number of families representing single species are 33 which are 44% of the total families studied from the area of study. The ratio of genus to species is 1: 1.5 which is low because of small pocket of area of study. However, this figure is very close to genus species ratio 1: 1.7. for India which indicates that area is studied intensively.
**Fig. 1.** Bar graph showing numerical size of 10 dominant families in terms of number of genera and species.

**Fig. 2.** Bar graph showing numerical size of 10 dominant genera and number of species in each genus.
As a consequence of exhaustive studies of the Campus Flora a total of 75 families were studied of these 265 species representing 171 genera and 64 families are dicotyledons and 50 species representing 38 genera belonging to 11 families are monocotyledons. The genus species ratio of the Campus Flora of Amar Singh College, Srinagar is 1:1.5 which is very close to the Flora of British India which is 1:1.7. This indicates the exhaustive present floristic study. *Euphorbia lathyris* L. has been reported as a new record for the flora of India by the author (*Bhellum* and Magotra 2001) another new record for the Flora of Jammu and Kashmir reported by the author (*Bhellum* and Magotra 2008) and *Ornithogalum umbellatum* L. recorded new for the Flora of Jammu and Kashmir State.

**Result:** As many as 315 species representing 209 genera belonging to 75 families collected and identified from the Campus Amar Singh College, Srinagar. A total of 171 genera representing 265 species identified are dicotyledons and 50 species of 38 genera are monocotyledons. The main highlight of the Campus Flora are *Euphorbia lathyris* L. new record for India and two species viz. *Calystegia hederacea* Wall. and *Ornithogalum umbellatum* L. recorded new for the Flora of Jammu and Kashmir State.

**Conclusion:** The ten dominant families in terms of number of species are Asteraceae, Poaceae, Brassicaceae, Fabaceae, Scrophulariaceae, Lamiaceae, Ranunculaceae, Cyperaceae, Euphorbiaceae, and Apiaceae. Number of families representing single species are 33. The ratio of genus to species is 1:1.5 which is low because of small pocket of area of study and I:1.7 for India.

36. Stellaria media (L.) Cry.
PLATE X

38. *Trigonella incisa* Benth.
39. *Verbascum thapsus* L.
40. *Veronica persica* Poir.
BIBLIOGRAPHY

INDEX

ACERACEAE
Acer negundo L.
Achillea millefolium L.
Achyranthes bidendata Blume
Aerva sanguinilenta (L.) Blume
Aesculus indica Colebr ex Camb.
Ageratum houstonianum Mill.
Ailanthus altissima (Mill.) Swingle
Ajuga lobata D. Don
A. parviflora Benth.

ALISMATACEAE
Alisma plantago-aquatica L.
Alliaria petiolata (M. Bieb.) Carava & Grande
Alternanthera sessilis (L.) R. Br.

AMARANTHACEAE
Amaranthus blitum L.
A. caudatum L.
A. spinosus L.
A. viridis L.
Anagallis arvensis L.
Andropogon distans Nees ex Steud.

APOCYNACEAE
Aquilegia vulgare L.
Arabidopsis himalaica (Edgew.) O. E. Schulz.
A. pumila (Steph.) N. Busch
A. Wallichii (Hooker f. & Anders.) Busch.
Arabis alpina L.

ARALIACEAE
Arctium lappa L.
Arenaria leptocladus (Reichb.) Guss.
A. serpyllifolia L.
Artemisia biennis Willd.
A. vulgaris L.

ASCLEPIADACEAE

ASPARAGACEAE
Asparagus officinalis L.
Asperugo procumbens L.

ASTERACEAE
Avena fatua L.

BALSAMIACEAE
Bellis perennis L.

BERBERIDACEAE
Berberis aristata DC.
Bergenia ciliata (Haw.) Sternb.
Bidens bipinnata L.
B. tripartita L.

BIGNONIACEAE
Blysum compressus Panzer ex Link

BORAGINACEAE
Bothriochloa ischaemum (L.) Keng

BRASSICACEAE

BUTOMACEAE
Butomus umbellata L.
Calendula arvensis L.
Calystegia hederacea Wall.
Campanula aristata Wall.
C. media L.
CAMPANULACEAE
Campsis grandiflora Loir.
CANNABACEAE
Cannabis sativa L.
Capsella bursa-pastoris (L.) Medik.
Cardamine flexuosa With.
C. hirsuta L.
C. pratensis Hk. f. & Anders.
Cardiospermum halicacabum L.
Carduus edelbergii Rech. f.
Carpesium abrotanoides L.
CARYOPHYLLACEAE
Catalpa bignonioides Walt.
Cayratia trifolia (L.) Domin
CELASTRACEAE
Celtis australis L.
Centaurea cyanus L.
C. iberica Trev. ex Spreng.
Cerastium vulgatum L.
Ceratocephalus falcatus (L.) Pers.
C. testiculatus (Crantz.) Pers.
Cichorium intybus L.
Circium arvense (L.) Scop.
C. wallichii DC.
Chaerophyllum acuminata Lindl.
CHENOPODIACEAE
Chenopodium album L.
C. ambrosoides L.
C. botrys L.
C. foliolosum (Moench.) Aschers.
Clematis connata DC.
CLEOMACEAE
Cleome gynandra L.
C. viscosa L.
Clinopodium vulgare L.
COMMILINACEAE
Commelina paludosa Bl.
Conium maculatum L.
CONVOLVULACEAE
Convolvulus arvensis L.
Coryza bonariensis (L.) Cronq.
C. canadensis (L.) Cronq.
C. stricta Willd.
Coropopus didymus (L.) Smith.
Cotula anthemoides L.
Cousenia falconeri Hook. f.
Crataegus monogyna Jacq.
Cuscuta capitata Roxb.
CUSCUTACEAE
Cynodon dactylon (L.) Pers.
Cynoglossum lanceolatum Forssk.
CYPERACEAE
Cyperus nubigena D. Don
C. nivalis Boott
Cyperus difformis L.
C. iria L.
C. nitens Retz.
C. rotundus L.
C. sanguinolentus Vahl.
Dactylis glomerata L.
Dactylolcentium aegytiacum (L.) Willd.
Datura stramonium L.
Daucus carota L. var. sativa
Descurainia sofris (L.) Webb. & Berth.
Dicanthium annulatum (Forssk.) Stapf
Eclipta prostrata (L.) L.
Eleusine crusgalli (L.) P. Beauv.
E. indica (L.) Gaertn.
Epilobium hirsutum L.
E. royleanum Haussk.
Eragrostris japonica (Thunb.) Trin
Erodium cicutarium (L.) L. Herit. ex Ait.
Erucastrum gallicum (Willd.) O. E. Schulz.
Euonymus hamiltonianus Wall.
Euphorbia clareana Hook. f.
E. helioscopia L.
E. indica Lam.
E. lathyris L.
E. meddanii Boiss.
E. pepulus L.
E. prostrata Ait.

EUPHORBIACEAE

FABACEAE
Festuca pratensis Huds.
Ficus carica L.
F. palmata Forssk.
Forsythia viridissima Lindl.
Fragaria vesca L.

FUMARIACEAE
Fumaria indica (Hausskn.) Pugsley
Gagea lutea (L.) Ker.-Gawl.
G. stipitata Merckl.
Galinsoga parviflora Cav.
Galium aparine L.
G. asperuloides Edgew.

GERANIACEAE
Geranium lucidum L.
G. pusillum Burm. f.
G. rotundifolium L.
G. sylvaticum L.
G. wallichii D. Don ex Sweet
Geum urbanum L.

Hedera nepalensis Koch
Helianthus tuberosum L.
Hemarthria compressa (L. f.) R. Br.
Herniaria hirsuta L.
H. incana (Lamak.) Hk. f.
Hibiscus mutabilis L.
H. trionum L.

HIPPOCASTANACEAE

HYPERICACEAE
Hypericum perforatum L.

ILLECEBERACEAE
Impatiens brachycentra Kar & Kir

IRIDACEAE
Iris kashmiriana Baker

JUGLANDACEAE
Juglans regia L.

JUNCACEAE
Juncus bufonius L.
J. effusus L.
Kickxia incana (Wall.) Penn.
Lactuca dissecta D. Don
L. dolichophylla Kitam.
L. rupunculoides (DC.) Clarke

LAMIACEAE
Lathyrus aphaca L.
Lavatra kashmirica Cambess.

LEMNACEAE
Lemma polyrrhiza (L.) Schleid.
Lepidium capitata Hooker f. & Thomson
L. virginicum L.
Leptorhabdos parviflora (Benth.) Benth.
Lespedeza juncea (L.) Pers.
Ligustrum lucidum Ait. f.

**LILIACEAE**
Lithospermum arvense L.
Lobularia maritima (L.) Desv.
Lolium temulentum L.
Lonicera japonica Thunb.
Lotus corniculata L.
Lycopus europaeus L.
Magnolia grandiflora L.

**MAGNOLIACEAE**

**MALVACEAE**
Malva parviflora L.
M. sylvestris L.
M. verticillata L.
Malvastrum coromandelianum (L.) Garcke
Marrubium vulgare L.
Matricaria chamomilla L.
Mazus japonicus (Thunb.) Ktze.
M. pumila (Burm. f.) Steenis
Medicago falcata L.

BLB. 148
M. lupulina L.
M. polymorpha L.
Melilotus alba Medik ex Sessr.
M indica (L.) All.

**MELIACEAE**
Melia azedarach L.
Mentha arvensis L.
M. longifolium (L.) Huds.
M. piperata L.
M. spicata L.
Micromeria biflora (Ham.) Benth.
Mirabilis jalapa L.

**MORACEAE**
Morus alba L.
M. australis Poir
Myosotis caespitosa C. F. Schultz.
M. sylvatica Hoffm.
Myosoton aquaticum (L.) Moench.
Nerium indicum Mill.

**NYCTAGINACEAE**
Oenothera rosea Soland

**OLEACEAE**

**ONAGRACEAE**
Ornithgalum umbellatum L.

**OXALIDACEAE**
Oxalis corniculata L.

**PAEONIACEAE**
Paeonia emodi Wall. ex Royle

**PAPAVERACEAE**
Papaver rhoeas L.
Parthenocissus tricuspidata Planch
Paspalum ambiguus Lamk.
P. paspaloides (Michx.) Scribner
Pennisetum flaccidum Griseb.
Perotis latifolia Ait.
Phalaris minor Retz.
Phyla nodiflora (L.) Greene

**PLANTAGINACEAE**
Plantago amplexicaulis Cav.
P. depressa Willd.
P. lanceolata L.
P. major L.

**PLATANACEAE**
Platanus orientalis L.
Poa angustifolia L.
P. annua L.
P. bulbosa L.
P. pratensis L.

POACEAE

POLYGONACEAE

Polygonum aviculare L.
P. hydropiper L.
P. orientale L.
P. plebium R. Br.

Populus balsamifera L.
P. capsica Bornm.
P. ciliata Wall. ex Royle

P. nigra L. var. italicca (Moench.) Koehne

PORTULACACEAE

Portulacca oleracea L.

Potentilla supina L.

PRIMULACEAE

Prunella vulgaris L.

RANUNCULACEAE

Ranunculus arvensis L.
R. laetus Wall. ex D. Don
R. muricatus L.
R. sceleratus L.
R. trichophyllus Chaix

Rorippa islandica (Oeder) Borb.
R. nasturtium-aquaticum (L.) Hayek.
R. sylvestris (L.) Besser

RHAMNACEAE

Rhamnus oxyphylla Edgew.

Ricinus communis L.
Rubia cordifolia L.
Robinia pseudo-acacia L.

RUBIACEAE

Rubus saxatilis L.

R. ulmifolium Schott.

Rumex acetosa L.

BLB. 525

R. hastata D. Don

R. patientia L.

Sagina apetala Ard.

Sagittaria sagittifolia L.

SALICACEAE

Salix alba L.

S. babylonica L.

S. elegans Wall. ex Anders.

Salvia lanata Roxb.

SAXIFRAGACEAE

Scandix pectin-veneris L.

SCROPHULARIACEAE

Senecio vulgaris L.

Setaria tomentosa (Roxb.) Kunth

S. verticellata (L.) P. Beauv.

S. virdis (L.) P. Beauv.

Sibbaldia cuneata Hornem.

Siegesbeckia orientalis L.

SIMAROUBACEAE

Silybum marianum (L.) Gaertn.

Sisymbrium brassiciforme C. A. Mey

S. loeselii L.

S. officinale (L.) Scop.

Sium maculatum C. B. Clarke

SOLANACEAE

Solanum nigrum L.

S. surattense Burm. f.

Solidago virga-aurea L.

Sonchus asper (L.) Hill

S. brachyotus DC.

S. oleraceus L.
Stellaria media (L.) Cry.
Suaeda fruticosa Forssk.
S. monoica Forssk.
Syringa emodi Wall. ex Royle
Tagetes minuta L.
TAMARICACEAE
Tamarix parviflora DC.
Taraxacum officinale Weber
Torilis japonica (Houtt.) DC.
Tragopogon dubium Scop.
T. pretense L.
Tribulus terrestris L.
Trifolium hybridum L.
T. pretense L.
T. repens L.
T. tomentosum L.
Trigonella foenum-graecum L.
T. emodi Benth.
T. incisa Benth.
TRILLIACEAE
Trillium govanianum Wall. ex Royle
ULMACEAE
Ulmus wallichii Planch
URTICACEAE
Urtica ardens Link.
U. dioica L.
Valeriana jatamansi DC.
VALERIANACEAE
Verbascum thapsus L.
Verbena officinalis L.
VERBENACEAE
Veronica agrestis L.
V. anagallis-aquatica L.
V. arvensis L.
